TO THE RIGHT

Honourable, the Lord

Zouch. T.B. vvilheth prosperitie in this world, and eternals life in the vvorld to

Come. Marin of the army

Haue been (right honorable and my werie
good Lord) since the
time your Honour
wouchsafed to take
knowledge of mee, &

to shew both by benefits and other wayes, especiall fauour towards mee, desirous that some testimonie might remain of my duty, of thankfulness again to your Lordship: which although it be not able either to carry with it the whole affection of my minde, or in any sort match with your A3 L. boun-

THE EPISTLE

L. bountie, yet may it be, as it were, an af-Tay or taste of the performance of that dutie, wherto both I am bound, and my heart gladly yeeldeth unto. This affay I prefent you in this my simple Newyears gift, being a defence of our native medicines, with difproofe of those of forrain nations. The question I once disputed in open place: & being required of certain to shew my mind more at large therin, I thought good to comunicate it with moe then one or two, adding thereto my reasons to be examined by men of wisdom & understäding, that if serre in this point, I might have the moe reformers: if my sentence be approoued, the benefit therof might be reaped of many. Now. my request is onto your L. that this my simple gift be accepted with regard of my hearty good meaning, rather then of the thing it selfe, beeing too base in respect of your Honors person or desert. You knowe welthe price of schollers gifts, who as their treasures are of the mind, or not of gold, or filuer.

DEDICATORIE.

ai banco arcaro H c.o.Y deLord, T. B.

To the gentle Reader.

Would not have the cignorane (gentle Reader) of the affection wherewith I lette foorth this small Treatise. It is not with any carping minde, I afassure thee, against any person or state, or with defire to publish a new toy, thereby to seeme to bee some bodie. But considering the benefits which might arile of the truth of this matter, which seemeth to me most true, I was willing easily to yeeld vnto the requests of certaine, who thought it good I should make it common with thee: which so much the more willingly I doe, in that I hope this my enterprise shalbe a meanes to prouoke others to deale with the same Argu-

ment more plentifully, and kindle in

vsagreater diligence to inquire after the medicines of our owne Countrie yeeld, & more care to put the in practice. The case is neither mine nor thine onely, but the Common-wealths, the benefit whereotallare bound who are members thereof, according to their place & calling, most diligently to seek. And this I delire of thee: if thou art of another mind then I am in this matter, thou wouldest keepe moderation of thy affections towards my person? & in the searching out of truth loyn with me sand as I give thee leave to thinke in this point what lifteth thee, so difdaine not him who eafily giveth his care to reason, and hath dedicated his daies to serue thy commodity; which if he misserh of, his good will yet remaineth with thee, which hee also re-

quireth to bee yeelded on thy part to him againe.

Farewell.

For moist diseases, Cabbage, beets, camomell, fenell, beanes, fennorecke, &c. pag. 51

These simples purge either by vomit or stoole. By vomit, Radistroors with the feede, the Pepon-root, and nettleseed, folk foot leafe and root, the mudale barke of the vivalnuttree, and the long blossoms thereof, the seed of broome, and the slowers thereof purge vehemently. To purge by the stoole, the slowers and leaves of the Peach-tree, Violets slowers and seeds, the great garden docke, or Munks rhubarb, damaske-roses, wild saffrom, the powder of Fethersen, free read pag. 52. and 53.

For wounds, plantain, bounds-tongue, wild yarrow, Cardusbenedictus, Betony, Scabios, Elme-leanes, Adders-tongue, Moonewort, &c. pag. 57.

FINIS.

Dec 1 - The state of the state PARTY - SCHOOL - S e de la companya de l and a String of the field of a set es car divisiónes, establishes and en la la companya de the first section of the section of

A Treatise, wherein is declared the sufficiencie of English Medicines, for cure of all diseases cured with Medicine.

LTHOVEH I be not ignorant that truth off purchaseth hatred, not of her own nature, (then which nothing is more amiable and gratious, but by reason of the great corruption of mankinde, whereby, as men

are plunged in blindnes & errour, so they dasse with their eyes at the light of truth, & fauour the things onely which agree with their corruption) although I say this hath beene alwaies the condition of truth in the world, and such cuill grace findeth it with the most of men, especially when it first offereth it selfe to be acknowledged for that which it is indeede: yet for the love I beare it, being a Philosopher by profession, and for the publike benefit, being borne under that condition of men, whereby one is bound to imploy his gifts for the benefite of another: I haue ventured voon the displeasure and disgrace of men, and have taken some paines to bring to light one daughter of Truth, of Time, seeming to have beene forgotten, which if the be received and embraced

braced of thee gentle Reader, as the deferueth, shall requite thee with no lesse pleasure and profit, then many of her elder fifters. For what can bee more pleasant vnto thee, then the injoying of medicines for cure of thine infirmities out of thy native loyle, and countrie, thy Field, thy Orchard, thy Garden ? and what more profitable vnto thee, then thereby to avoide the infinite charges riling vpon the vic of straunge and foreigne medicines, whereby not onely thy substance is wasted, but thy health oft times greatly impaired? This is then that truth which I commendanto thee. As England aboundeth plentifully with all things necessary for thy maintenance of life, and preferuation of health; so needeth it not, partly through natures inflinct, partly by the indufire of men, sufficiencie of medecine to cure the ficknesses and infirmities, whereunto our nation is subicet : which my opinion and judgement, confidering the vie and custome hath long bene to place greatest value in strange medecines, and the practile of the most doth ratific the same, I know e must needs leeme Arange vnto thee, but read, consider. and then judge, and at the least let me enterchange my paines with thy attentiue waying of that which thou flialtreade, prejudice let alide; and that a way may bee made for the playner handling of this matter, I briefly define a remedie, a medicine, a difcale after this fort as followeth. First beginning with a remedie, which I call the work of the Phylician, whereby health may be repaired. Physicke is an art which taketh charge of the health of man, preseruing and mainteining it present by the right vie of meate, drinke, and exercise, with other such helpes of

of nature : and reftoring the fame decayed, by diet, medicine, helpe of hand, or furgerie inftrument seuerally reed, or by ioynt force applied. Which three are Phylicke instruments, whereby the action of curing is performed, which action I call a remedie. And the second of these instruments, namely a medicine, I define an aductfarieforce of some naturall thing, equally matching the proper or next cause of the disease: Of which medicines, Hearbes, Trees, Stones, Mineralls and metalls, Earthes, Waters, and all fruites, are matter onely, and not the verie medicines them felues : for as Phylicke it selfe is an art, and the action artificiall, and not of nature, so are the instruments of the same action artificiall, and not naturall. And as nature affourdeth not to vs of her owne worke, either garments, or houses, or any kinde of instrument, but onely the matter whereof such instruments may bee made, leauing with vs an industrie rightly to frame them, and wiledome to viethem : 10, no more is Lettis, Poppie, Rhewbarb, or Scammonje a medicine, then an Oake a Table or Ship, or a quartie of stones, an houle. Moreover, all medicines standing in a kinde of relation to the disease which by meanes of the patients age, lexe, time of the yeare, custome, and such like occasions greatly varie, no nature which alwaies keepeth constant in the own kind can therefore either bee a medicine, or properly beare the name thereof: which I wish to be noted, least it be thought the simples, and such other naturall things were medicines, because commonly they carry the names of them. And thus much shall bee sufficient so have fuid of the nature of a medicine. B 2 Now

Now a disease (which remaineth last to be defined) is such state of the body, as thereby it is vnabled to performe aprly the actions thereto belonging, or those actions which the soule doth accomplish, by the instrument of the bodie.

Thus much briefly concerning the explication of the tearnes wherein this trueth is propounded.

Now the reasons, whereby both I am moued to be of this judgement, and am so hardie asto propound it to others to be received, whereof the first rifeth from the Christian doctrine of Gods prouidence, which as it ferueth greatly to establish the chiefe points of Philosophie, to being drawne and more particularly applyed to the maintenance of manslife, carieth with it as a sufficient provision for maintenance and preferuation of health, a like furniture, and as auniwerable to the necessitie of the patient, health being decayed; I will not fland to inigeate of providence being well knownesa Christians : and being a truth in Dininitie, and Christie anitie, cannot be falle in Philosophie. Although the best of the auncient Philosophers and Poets haue alwaies kept it as a sure ground, who as they setue little to establish vs, having a surer foundation, yet may they justly condemne the Atheist of this age, who to farre hath quenched those remnants of the light of the first creation, that all things seeme to him Fortune and Chaunce

There is no nation under heaven to poore and defixite, but it hath of the owne countrie toyle sufficient to content nature with, of foode and apparell, which as they be two pillars of life, to from them are taken the means of prefernation of health, which OF

as to beafts are applied by naturall instinct, so are they yied of man by reason, the temperer of appetite and affection.

This prouision of sustenance is most agreeable with the goodnes of the Creator, who ashe is anthor of being to the Creature, lo fayleth he notto maintaine and preserve the same Creature the whole terme of the being thereof: and because the necesfire of the Creature is perpetuall, his wiledome hath also foreteene, and provided a perpetual supplie of fuch fustenance, as is he for that nature which standeth in neede thereof: and because the neede is not once for all, but parted into times, varying, according to the divers disposition and nature of that For which this prouision is made, he hath also so bestowed his goodnes in this point, that at all times to all things, necessarie sustenance should not be to feekes and this extended not to men onely, but even to brute beafts, and all things which require nourishment. The end of this proution is the prefernation of the Creature, which Nature most carefully studieth (if it might be perpetuall and eternall) thereto to bring it, the goodnesse of the Creator, will nothing wanting, his wisedome will have it waite vponthe necessitie of the Creature: wherefore as the Earth is called the mother of all things, not because it bringeth them forth onely, but yeeldeth them perpetual nourishment, so is the countrie of all people to them named, the parent of all parents, Then by natures lawe, all things being abundantly, ministred vito vifor the preservation of health at home in our owne fieldes, pastures, riuers, &c. how can the wisedome of God, and his goodnesse

Rand with the absence of Medicines and remedies necessarie for the recouerie of health, the neede being as vegent of the one as of the other : and lo as great an occasion of practife of the same goodnes and wisedome in the one as in the other? which being most plaine and enident, it followeth necessarily that the medicine should be as read efor the sicke, as meate and drink for the hungry and thirstie: which except it be applied by the native countrie, can not be else performed. It is knowne to such as have skil in nature, what wonderfull care she hath of the smallest of creatures, not onely giving to every part of them a carefull discharge of fundrie duties, as of attraction, retention, concoction, expulsion of excrements, distribution, and such like, but also to the whole creature, a knowledge of medicine to helpe themselves, if haply diseases annoy them : neither out of India, nor Arabia, but from their verie haunt: which being not denied to them, much more is graunted to vs, in so much as (the worke of nature being most excellent in man) she is more vigilant ouer mankinde then ouer other creatures, as by the shape thereof most plainely appeareth. The Swallow cureth her dimme eyes with Celendine: the Wesch knoweth well the vertue of Hearborace; the Doue the Veruen : the Dogge dischargeth his mawe with a kind of Graffe: the Spider is Triacle to the Munkey: the Hippoposamus dischargeth the aboundance of his bloud by opening a vrine : and Ther is faid to have frewed the vie of the Clyffer: and too long it were to recken up all the medicines which the beafts are knowne to vie by natures direction onely, and those not so farre setched as our drugges, 15

drugges, but familiar with them, and taken from the place of their foode: it being very probable she hath bestowed this gift even vpon all, one having interest in natures care as well as another. By this then may weegather, if nature faile not the verie beafts in this behalfe, neither sendeth them to borrowe afarre of, much more is that performed vnto ve the Lords of all the creatures, and for whole vie all things were created : except we be thought leffe Subject to dileales then they, wherein we be so little priviledged, that no creature in that respect is so fraile as we, and thosemost subject to infirmities which are gouerned and dieted by vs. So that wee of all creatures have greatest neede of Natures liberall hand in this behalfe. For be it for the most part, we are more healthfull then fickly, and to have greatervie of the meanes of keeping health, then of restoring, yet hardly can a man fay which of them is more necellarie to be readie and prest at hand, the daunger of diseases being alwaies imminent, although diseases themselves be not alwaies present. Now if to any the reason seeme weake from that which should be to inferre a being thereof, we are to understand in the workes of God, what soever should be, is; hee being a workman of an absolute power and cunning. But faith one, the East and West Indies Arabia, Barbarie, the red Sea, are the Mines, as it were, and the fountaines of medicines; and Spaine, Protugale, and Venice, the vents of fuch things, and Nauigation the meanes to obtaine

It cannot be denied, but those countries yeelde many strainge things, whereof wee take viewith

great delight, and Nauigation serueth greatly for communicating of commodities and enterchange of merchandise : but how farre, and of what commodities? Verely of such as if our delicacie would giue vs leaue, we might well spare, being things rather of superfluous pleasure then necessarie reliefes, and seruing rather for a certaine pompe, then for maintenance of life : and which without great working of the wittes, might be proued to bring more harme to our countriemen, then commodities both in respect of the diversitie in complexion of our bodies from those of straunge nations to whome they properly belong, the corruption of their outlandilh wares, the felling of one thing for an ozer, & the withholding from vs the best of chayce: but of this hereafter. Moreover, Nauigation being of a later invention then the necessitie of medicine. neither practifed of many nations at this day, cannot supply this want, or if men beganne then first to be discased, when they began to find waies in the Sea to those far countries, doth it not greatly detract from that prouidence wherby all things are guided, to lay the recouerie of mans health upon the adventures of Merchants? & the disease being in the one part of the World, to have the medicine in the other, year as farre distant as the East is from the West, and the life and death of a man to stand vpon a halfepenie weight of Scammonie, or a dramme or twaine of Rhewbarb?

Nay, which is yet more abfurd, that the health of so many Christian nations should hang upon the courtesse of those Heathen and barbarous nations, to whome nothing is more odious then the very

name of Christianity? And who of malice do withholde from vs. such medicines as they knowe most for our vse? Whereupon the Turke denieth vnto the Christians at this day the Terra Lemnia, a medicine to be preferred before the chiefe of those weeperswade our selues to emoy. The corruption of their drugges, is it not so great, that in this light of all knowledge, scarce is one able to discerne the right Bolno Armena, from the Ocre of Apulia, or to discouer the adulterating of Ambergreece, & Muske, with a number of other corruptions, which have gotten strength by custome of errout? Thamarinds, are counterfeited with Prunes, Scammonie with the milk of Spurge, Manna with Suger and the leaves of Sene, Aspalathum with the inward part of the roote of an Olue tree, Frankencense with Rosin, Bdellium and Sarcocalla with goomes: for Bolus Armena is fold ared earth out of Apulia, for Malabatheum a leafe of a Limon or Orange, for Turpeth some other other roote dipped at both ends in Goom. Which bee as like in vertue to the simples whereof the bear they visated & maske, as Chalke to Cheefe, according to the prouerbe. And greatly thou art deceived to thinke our Nauigations store vs with ancient Medicines, wherwith Physicke in olde time hath beene furnished. For at this day neither is Balme known vnto vs, neither Xyloba famum, nor Cardamomum, nor Amomum, Deither Coffus. neither Calamus odoratus, Afpalathus, Agallocum, Narcaphthum, with the most of the noble ancient Medicines: fo that Nauigation hath not at any time supplied this want voto vs, and how it should hereafter I knowe not, except Galen take paines againe to faile into Cyprus, into Palestine, and Lemmos.

hands. For what hope is there to be had of the prouition made by Merchants? who buy to fell onely, and thereof to reape game; and by reason they be wnlearned, if they should be faithfull, yet must they faile greatly in this poynt, and then must wee vie such medicines as wee can come by, and the patient

recouer such health as he may.

For the most part these drugs come out of Spaine or Portugale, eyther setched of vs or brought of them, yet neither of them hath borne name of yeelde of the best simples, so that if they bee of those countries, then they are not such as they should be: If Spaine and Portugale setch them elsewhere, then lyeth the assurance vpon their credite. Or terme know how they discerne the Coriander of Ethio. Pia, the blacke Hellebrus of Cyrene, the Anomium of Seythia, the Myrtha Troglodistes, the Opium of Apulia, (which are counted the best) from the same growing in other places, which never carried hame of commendation for such simples.

The Coloquintida growing alone vpor the plant, is much suspected of good Physitians, the Squille that hath no fellows, is thought to sauour of a venemous nature, likewise the Thymelea: now, when these are gathered to the Merchants hand, who shall tell him how they grewe, or who shall inquire but the Philosopher that knoweth what may come thereby to these simples, neither is the daunger lesse in the manner of laying them vp, and keeping them ouerlong: besides the instrume of gathering being either ouerpassed, or prevented, greatly diminisheth the vertues of the Medicines. As the vie of Emphor-

bium

mit, Med

Med

me blum is perillous before it bee a yeare olde, and after three yeeres it is nought worth; fo Ageriske gathered before it be ripe, or kept past two yeeres, becommeth unwhollome. And as the Peonie toote ybe is to be gathered in the wane of the Moone, and the Crayfish to be taken after the rifing of the Dog TIC | ftarre, the Sun entering into Lee, to are there maiene my other, which if they milletheir due time of gathering, faile greatly in their vertues. To thele coreine suptions moreover may bee added the washing of t of thesea, the long journeys they are brought, whereof by it should seeme nature had denyed voto vs the of wle of them, as to whome they were not of her yeelbluc ded; with such difficultie, and as it were, by conere, straint, they come to vs. Then if the best of ancirlet ent simples be partly voknowine and wanting, partly hia. adulterated, partly by age and other meanes spent 100 before they come to our vie, what shall wee lay to 1. our compounds and mixtures, which rife of thefe me simples ? Can the temper mend them? of a quid me pro quo, as they call them, serue the turne ? No verily, not our turnes, to whome the substitute Memt, dicines, as I may call them, were not appointed, beille ing in great part, as hard to come by, as the Medinecines whose substitutes they are, and as much vnhen hall knowne vnto vs. As for Agallecum Calamus odoratus, for Amomum Acorus, for Castorium, Bilphium, for but Crocamagmo, Agailocus, with a number of the lame ele. forte, which thele fewe leaves of paper will not adcin mit. Neither is it to bee thought these Lieutenant ent Medicines serue at all turnes in the place of the right ing Medicines, for lo should Ginger serue the turne of Folesopte to purge by vomit, which it can no more 108then

iu18

then curds of Cowe milk can foften and supple lik butter, or the dung of the stocke Doue purge lik Eupherbium or the Dock root draw flegm from the head like Pellitorie, which Galene notwithstanding maketh substitutes of these medicines which have fuch operation. I conclude therefore, feeing Nauigation can not affoord vs either the simples which wee seeme to neede, and those which it doth, both corrupt and counterfer in the greatest part; we have neither to craue thereof in this point aide, much leffe to trust thereunto. Now the simples being (bu for the most part) bastard ware, how can the compoundes that amount of the fame bee other ther counterfet? Whereupon as Cardanus saith in his Methode of curing, the wife Magistrates of Venice have often times forbidden the making of Triacle and Mithridatum, because the simples could not be had, whereby they should be composided : which if Venice, the greatest Mart in this part of the world of fuch wares can not avouch, what can we hope for from other places ? that a manwould martiell to fee the great store of them in all shops of Apothecaries under the names of Triacle and Mithridatum of Andromachus: and it being required in Triacle before it be vied, it should have a time, as it were, of mellowing, which of Galene in his booke of Triacle to Pife is extended to 12. yeares, and of Paulus Egineta in his 7. booke by 7. yeares, for those that are bitten or stong of venemous beasts, or have drunke poylon, or are infected with the pestilence, and in other diseases, from ten yeares till it be 20. of age; I maruell what affurance we have of the age of this Twacle, which is ordinarie in vie; or if we have none;

low we darevie it at adventure, knowing by age the rertue thereof hath no small alteration. I would hese inconveniences were the smallest, which I have but briefly, and as it were, for a tafte run ouer, yet were even they sufficient to stay our over hastie vse of such strange Merchandise, and to move vs to perake vs to those weeknowe both in the blade, and in the feede, in the roote, & in the fruite, & know, the aire, the hill, the valley, the medowe or Marish ground where they growe. But this trust vppon outlandish Medicines hath much more necrely touthed vs then so. If a man would say by this ouerhathe embracing what locuer straunge nations doe as: twere, purge ouer vnto vs, we drinke divers times anke poylon in steede of wholesome medicine. the trow it would infily moue vs to bee admited, and ibe iotto passe ouer the enquirie of a reason, why such one should thinke so, being one whose vocation endeth to the charge of the health of mens bodies. the right Hermodallils are commended for excelent medicines against all paines in the joynts, as the sour, the Schiatica, and fuch like, from which they, An surge groffe flegme. Deronicum Romanum hath great ommendation for comforting the heart, expeling poylon, against the Cough, for anoyding of umors which overcharge the Cheft, which are reatvertues doubtlesse in them both. Now if they at he shops, as they beare the name of these mediines, fo caried not with them in steed of thele vernes daungerous poylon, then should I have lesse si suse to exhort our nation to betake them to their Bardens, and Fields, and to leave the banks of vilus, and the Fens of India. The common Hermodattils

modallils being a kinde of poylon called Fpheme had rum, so named, because with such swiftnesse it char be, geth and overchargeth our vitall spirits, that it kil mite leth him that hath taken it in one day. The other km commonlie called Doronicum Romanum, and view with for an especiall cordiall, so that it bath place in the electuarie of pretious stones, in the electuarie of Amber , in the cordiall pouder, this Deronicum, say, called of Mathiolus Demoniacum, that is to say divelish, noting thereby the vertues thereof, is no take baser poylon then a verie kinde of Aconitum, by Bine, Mathiolis experience, which he confesseth himselfers, (before having bin abused by the common errour) first to have learned of Iacobus Antonius Cortusus han ? a man verie skilfuil in thenature of simples, which who Lacobus taught him the experience by giving it to mine dogs, which it killeth. Now if by reason no such and daunger hapneth to vs. by the vie of them, they like feeming not so daungerous: wee are to understane they bee giuen in small quantitie, and mixed with the diuers remedies against poylon, the good prouidence of God prouiding fo, that otherwise they should not be ministred, as in the purging electu- Ou ary of Descrice, Hermodallils are bridled with Cina mon, and the pouder of Diatragatanthum frigidum where indeede it hath somewhat too large scope being better tempered in Benedicla, with Clones Parfely feede, Galanga, and Mace, and in the piller tille of Hermoductils with Aloe, Mirobalans, Bdellium the feede of Herberace, which have force against poylon, the which small quantitie of them being bridled, & dulled with other medicines, especially such as result the force of poilos, is not deadly to vs. although great hurt therof must needs enfue. I have

tood the longer vpon this point of strange media-ines, in answering the supplie by Nauigation, the rather, because it seemes most to make against vs in he maintenace of our home medicines, & breedeth, tales it were, a lothformes of those blessings of God, which we may daily at commandment enjoy. But his therto hath only bin shewed the corruptions & cour Werfeting of foreigne medicines which belongeth to Intertaine only, & not to all: (although those certaine me the chiefe, & of greatest price) & that being fores by cene, the provision out of strange & far distant natia. ons, may feeme well to ftand with that prouidence wespeak of : and except they be in respect of their trangenesse hurtfull or enprofitable ento vs. the lloour need, natures care should seeme no whit to be demissed. The reasons which I have before alledge d, I leave to the indifferent Reader to confider of: 82 indrecaute I am to far vrged, I easily sticke not to hold, with ve receive no smal hurt from all the kinds of strange nedicines, whereof I yeeld thele fewe reasons which ollows.
Our Baglish bodies, through the nature of the re-

Our Baglish bodies, through the nature of the retion, our kind of diet & nourishment; our custom of
the steep ariset great y divers from those straining enations,
therby ariset great varietie of himours, and excretion in our bodies from theirs, and so the causes
the disease rising vpon breach of diet, the diet
ing of an other fort) must needes bee vntion inde, and in a generalitie agreeable to ours, as
the straining vpon other matter then the same in vs: and
the straining vpon other matter then the same in vs: and
the straining vpon other matter then the same in vs: and
the straining vpon other matter then the same in vs: and
the straining vpon other matter then the same in vs: and
the straining vpon other matter then the same in vs: and
the straining vpon other matter then the same in vs:

otherwise framed by a farre other state of bodie. by reason of a divers kinde of life, the Medicines lon which helpe them must needs hurt vs, not finding who the like causes to strive with : and this no doubt is My the cause why wee are not able to beare such dole or in quantitie of their Medicines as those nations are to he whome they be native. Besides, they worke in our .Aim bodies after a farre more vokind manner then they report them to doe in theirs : nay, they deftroy vs. Wh and helpe them, which is an argument to me, that the enery Medicine hath a relation to the diseases of the inhabitant, which if it be profitable to straungers, Cha yet doeth it by a constraint and not halfe so kindely. The Greekes, as it may appeare by Dioscorides in his unn fourth Book & a hundreth & two & fiftie Chapter, In the entreating of Scammonie, are able to beare a greater pollo quantitie, yea, double, then we of Scammonie, which of is an ordinarie purger with vs. Who faith, thirtie 6,4 graines thereof may be given with 20. of blacke of in Helleborns, and 60. of Aloe to make a just purgati- line, on, & of Scammonie alone 60. graines. Now com- thefe mon experience teachethys the great oddes betwirt more Scammonie rawe, as they call it, and the same cor- 1 100 rected, which we name Dacrydium, both in vehe- lot mencie of purging, and tormenting the bodie: yet | trailing hardly dare we passe aboue 20. graines of the same, we and this mixed with cordialls, and stomach Medi-when cines. Moreover, their flender correcting of it, hind doth argue it to be farre less enoisome to them then which to vs, who correct it onely, or at the leaft, are contented with the correction thereof by a little Sale Med and Pepper, or a little Ginger: who for the plenty lening of excellent simples, which we both want and know held

not, and for their skill in the nature of those wee correct with, might as well have qualified it as we, whoe first wash it in Rose-water, wherein Crires Myrobalanus, Spike, and Cinamon have beene boiled: in which also we let it steep foure & rwentie houres, then drien, then mixen agains with eyle of sweet Almends, and some Goom for Tragacaneha, and last of all bake it in a Quince, concred round with paste. Who bath not horror of the torments which both the Hellebores bring to the body? yetlayth Panlus Egineta in his seauenth Booke, and fourth Chapter, the blacke Helleborus purgeth yellow choler from the whole bodie without paine: which cannot bee verified of our bodies, howfoeuer it be in theirs, and therefore we feare to minister the peuder thereof in any fort, but the steeping onely of the barkes of the roots, from 20. graines to 6. they being bold to take a whole dramme thereof in substance which is more then treble the quant tirie, for one dose. These strange workings of these foreigne drugges in our bodies, and a it more gentle and kinde working in theirs, doth of it not manifestly declare voto vs, that they were not created for vs ? doe they not force vs ofya tentimes with perill of our lives to give them omi, uer? that the patient knoweth not divers times whether he should stand rather to the courtesie of in his disease, then of his potion? There is a simple which hath not many yeeres beene in vie brought out of India, and highly commended, called Mechoaca, it purgeth gently fay they, without vexing or griening the bodie, without annoying the stomacke greatly, and ceaseth purging at your nots

加山山

me

thi

Pla En:

200

10

pleasure, with a little supring. These be great versues doubtlesse, and I wish wee could finde them in Mecheaca. For experience the touchstone hath bewrayed it in our bodies, to bee of a farre other operation: it tormenteth the body, it and noyeth the stomacke much, neyther doth a supping stay the vehemencie of purging, and this have I parely by mine owne experience found in Mechoaca. & partly by the experience of myfriends, who vpon the vie thereof haue much complained of these accidents. That juice or rather milk of Poppie, which is brought out of Asia named Opium, it is not inknowne to all the world, what a maruellous force it hathin benumning the lenfe of feeling, and veterly extinguishing the naturall heate of the body, so that we feare to give thereof into the body about the weight of two graines; and those corrected with Safforn, Castorium, and fuch like, least it cast the patient into such asleep, as hee needeth the trumpe of the Archangell to awake him. Now, the same Opium beeing taken of the Turkes, Moores, and Persians, bringeth to their wearied and ouertrauelled bodies, a maruellous recreation, in such fort, as they ordinarily vie it therefore as a present remedie, not in the quantitie of two graines or twentie, but euen an whole ounce or twaine at once, And Hol-Letius in his Scholia voon his Chapter of Phren-Ley, faith; that Rondelet a learned Physician, and the French Kings professour at Montpellier, reported voto him, that hee had seene a Spaniard take thereof into his bodie halfe an ounce at one time, without hurt. Wherefore

Wherefore if the difference of our bodies from those of strange nations bee so great, that the thing which helpeth them, destroyeth ve, that cureth them without annoyance, doth vehemently torment vs : I would wish vs to bee hetter aduifed, then to bee fo readie to embrace them, as to contemne in comparison of them, the medicines which receive, as it were a taming, and are broken ento vs by our owne foyle : neither art thou heere to looke the wifedome of the physician should consider the varietie and divers dispolitions of the bodies by age; complexion, region, lex, &c. and thereafter to temper these medicines, and so to avoide the daungers; for the question is not of the manner of ving thele things, for then should such consideration have place, but even of the verie nature, which no manner of vie can alter. Yet are thele simples excellent creatures of God, made for the vie of men, but not for all men: and although we may receive belpe from them, by a certaine generall communitie that our bodies have with those of Arabia, Barbarie, and the rest, yet no doubt as I have shewed in a fewe, so we receive by the vse of them so much the lesse good by them, as we most dester from them, and that which wanteth of the performance of good tovs, must needs turnevs to much harme, the vohelping part, (as I may call it) alwaies working, & fo euer harming. Neither doe I fee why the medicines of India, or Aezypt should be laide vpon vs. more then the Indian or Aegoptian diet, which is to eate Lizards, Dragons, and Crocodiks: for if the proper medicine doth alwayes regard his proper

aduerfarie, which caufeth the difeafe (as no doubt it thould doe) then there being a great difference betwixt our humors and theirs, as much in a manner as is betwixt the flesh of a Crocodile and of a tens der Capon, our medicines which are to fit vs. muft needes be of another kinde then theirs, which in our bodies not finding fuch humours & excrements; as that strange diet doth ingender, must neede seize spon the very substance of our bodies to have somewhat to worke on : which prinefull working especially of the purgers, caufeth the common faying among the people, to the great difcredit of our art; There is not a purgation but it hath a smack of poyson. Truth it is, no purgation can worke without natures annoyance, being in part a pricke of nature to awoyd her excrements: but when the is fo prouoked that shee sweateth colde sweates, that shee giveth over, that the patient swouneth not by the excelle of purging onely, but for the most pare through the cuill qualitie of the medicine, it is furely an argument, it wanted his proper subicet to worke in If needes wee will take vnto vs the practife of fuch strange medicines, (! call them medicines according to the common phrase, else properly bee they matter onely) it were to bee defired (which in part is performed) that such medicines as bee so perillous, might be planted in our naturall countrie, that through the familiaritie of our toyle, they might first growe into acquaintance with vs; before wee entertaine them not into our bosomes, but into our hearts, and chamber them with our vitall spirits. And as it is laide of the tree Perfea, which in Per-

fin

1

.

ě

fa beeing poylon, translated into Egypt, becommeth wholesome, bearing fruite to be eaten, and good for the stomake : so those natures receiung such mitigation of our soyle, might in time better fitte vs then they doe. Which as it can not alter their nature beeing impossible to bee dome by change of place, to doubtleffe might it purge away that euill qualitie which annoyeth vs, and feemeth rather to bee aneuill complexion, and as it were a cachechimie and dileale of the thing, then any necessarie propertie balonging to the nature. This which hath beene faid of Perfes, is also to be seene in other simples, which in other places are poylon, and kill with the verieshas dowe, yet brought into England and planted with vs, cleane change that venemous qualitie. Veli called Taxes, of Dioscorides is said to bee so dangerous, and of such venemous nature, that in Navarre the verie shadowethereof poyloneth him that fleepeth under it : and Egineta faith, being taken inward, it strangleth and swiftly killeth. This Taxus notwithstanding, being so perillous in other places, our English toile hath so reformed, that boldly our children doe cate of the fruit thereof without danger : the like may bee verified of our Hemlocke, which although it bee to bee numbred among the poyloning heathes, vet it is farre behinde that which groweth in Candie, or Megara, or Cilicia, scarce to bee accounted poylon in comparison of that in those countries. Now of thou shalt thinke (gentle Reader) as the change of region altereth some qualities, so all, and thereby empayreth the vertoe of the medicine : thou maift C3 eafily

eafily bee deceived. For as they depend not one vpon another, to may the one bee well without the other, though by one common forme, they feeme to be linked tagether to make one nature. Rhewbarb is knowne to have two qualities, one contrarie to an other, of purging the bodic, and stopping : yet by steeping may the one bee separated from the other, the purging vertue beeing drawne out by fleeping, and the stopping still remaining in the substance steeped: so likewise may the noylome qualitie of the medicine bee elchewed, the wholetome and medicinable vertue potwithstanding, being in full force, yeargreater retained, in so much as the hurtfull qualitie would hinder the operation of the healthfull, which being freed, and enyoked from the other, doth tarre better accomplish his worke. Of all kinds of Honie that of Greece, and namely of Attica and Hible are most commended, the next price is given to the Honie of Spaine and Nauarre : Vet it is certainelyknowne by experience, that the Englilli Home is most agrecable to our English bo. dies, and greater quantitie thereof may be taken, with leffe annoyance, yes none at all to those which are not of too hot a temper; the other kindes beeing more fiene, more apt to ingender choler, and to inflame the bloud, and more vofit to loole the body. Whereby wee may evidently see, that Nature vieth not one shope for euetic foote, but either ministreth a diuers commoditie in kinde, or else by the countrie, aire, and loyle, doth so temper it, that greater vse may bee thereof to the inhabitant of the same countrie. By this then

then which hitherto hath beene said, it is manifest wee receive great hurt by the vie of strange medicines, and not vpon reason onley, but from plaine experience, euen with hurt to our owne bodies, which as it is the greatest price of knowledge, so therefore ought wee the more to fette thereby, and more carefully to feeke to anoyde the daunger. Againe it is cuident, that the plans ting of strange simples frameth them more to our vie. Wherefore as there bee many excellent Gardens in England, especially in London replenies fhed with store of strange and outlandish simples, it were to bee wished such indevours were of others followed, that so we might acquaint vs better with these strangers , and by vie capio make them our owne. But what loyle will brooke all things' It is true, yet no doubt of those that it will brooke. which I dare lay are foure or five hundrett, this fruit galitie of nature towards vs as it is thought, might beare a greater thewe, and we more lafely viethem, especially the purgers, which carie with them great test annoyance. Now if it be obiected, the force of outlandish simples are thereby more feeble, as wee finde the Organ of candie surpassing ours in Arength, I meane the fame kind with that of Candie planted in our Gardeins, which may bee laide allo of other frange hearbes planted by vs : It can not be denied but they are fo, neither can the strange simple in all poynts bee equall with his kind keeping his native loyle, yet is the difference fearce halfe a degree voder i or if it were a degree fall out, what reason were it to fetch that one degree with much perill, and charge, as far as Candie, Spaine,

9

lo

4

Spaine, or Penice, or from another world : whereas a little increase of the quantitie of the thing. would eafily supplie the want, though I mention not the gaine of the freshnesse of the same, which maketh no small recompence of wanting in the force : neither is the nature or vertue of a medicine to bee esteemed by taste or smell, neither by the force it hath against the disease, the nature of a medicine lying in an equall matching of the cause of the dileafe ; which if it over-match, lo far off it is from the praise of an wholesome medicine that it becommeth a cause of a contrarie decale. Wherefore the commendation of a medicine lyeth not in force, but in such force. And therefore the counsell of the best Physiciansis, if the discase will beare any delay, as the most doe, rather to apply a medicine of a weaker force, then at once with a vehement one, to shake the frame of nature. And the weakermedicine being weake, either in respect of the nature of the simple, or the small quantitie, they counsell rather to vie that kinde of curing which is by the feebler medicine in kinde, then by reason of the under quantitie. For what skilfull Physician would cure a small distemper of heater and as it were in the first degree, with a small quane titic of Opium, or Mandrake, or Henbane, beeing, coldein the fourth degree rather then with the int quantitie of Endine, or Succerie ? or diminish à small excesse of humors, with an underquantities of Coloquintida or Scammonie, rather then with the inst quantitie of a feebler medicine? Wherefore ypon good reason they conclude itto bee farre safer for the patient, to cure with contraries of feebler force

force, either often repeated, or ma greater quantitie applyed, then with a maineforce of a medisine of equal strength at once to expell the disease, nature abhorring all vehement and fouden eyther he emptying or filling, heating or cooling, or any o-Į. ther kinde of fouden alteration: which being grounded upon good reason, the delaying of the force of strange medicines by our loyle, serueth greatly for the commendation both of planting them with vs, and of the medicines them selues planted; The simple still keeping within the compasse of macter of a medicine, neyther beeing to diminished, th but that by increase of the quantitie it may march with the difeale, which no man with realon can denye. Now; if the greatnesse of the quantitie happely procure loathloinnesse to the patients by extraction, that inconvenience may easily bee avoyded by which me mes a pound may bee brough to an ounce; an ounce to a dramines and a dramme to a fewe graines, to please the patient with. Such of strange medicines as will not brooke our climate, thereby declare the cuill disposition they have to cure the infirmitie of our bodyes. Every Medicine is as it were a meane betwire nourishmentes and poylons, executing thole medicines which are applied outwardly, which may both bee of mourishments and poylons, in i this meane betwire these extremes, there is such a sope and breadth, that some medicines incline to the one, and some to the other. Now, the best are such as rather incline to nourishments then le poylons, which as they doe fight against the dis la case, so have they a certaine token and pledge

0

6

G.

of agreement betwixt our bodyes and theirs:whereby they acknowledge vs for friendes, and not common enemies with the difease; the other medicines which have no such token and earnest, being apt, as well to destroy vs, as to take away the difease, and so ioone fellowship with ranke poyfons.

. Then our native foyle beeing by the ordinance of God the fittest to yeelde vs nourishment, from which our cattell and fruites have a putritive or nourishing juice, which render the fame agains to vs , what came wee thinke of those medicines to whome our fayle hath not a droppe of juice to veelde vnto, and giueth no entertainement? Verily wee are both to learne thereby, that nature doesh furnish us otherwayes, and also greatly to suspect them to bee of an extreme kinde of medicines, the spices onely excepted, and such as are saide to bee sympatheticall to certaine partes of our bodies. Which notwithstanding, leste serue that vie, the more strange and foreigne they be, What should I speake of the vnmeaturable charge and cost these strange medicines put vs voto? in my opinion, if it were but that, wee might bee stirred vp to this or such like consideration: Hath God lo dispensed his blessings, that a medicine to cure the lawndres, or the greene ficknesse, the rheume, or fuch like, should cost more oftentimes then one quarter of the lubstance that the patient is worth? and the provision of an whole yeere, whereof wife and children, and the whole familie. should with things necessarie bee mainteined in health, be walted ypon the curing of a Palfey, or

a Cholike or a swimming of the brain, or any other dileale whatfoeuer ? is Physicke only made for rich men ? and not as well for the poorer fort ? doth it onely waite vpon Princes palaces, and neuer Roope to the cottage of the poore? doth it onely receive gifts of the king, and neuer thankes & prayers from him that hath but thanks and praiers to bellowe? or doth the Lords goodnesse passe over them of low degree ? hath hee respect of persons ? yea, hath God given the bealt a remedy out of his owne food and patture (as it is most certainely knowne) with a skill to vie it, and hath bee let a journey as farre as from the Sunne riling to the going downe, as it were a wall of Braffe, and the fierie sword of a Cherubim to keepe vs from the atteiin aing of falues for our fores a fulfly may wee thus complaine, especially those of the poorer fore. And 4 if Phylicke (as it is in deed) bee an art common to all kinde of men, all forts of nations, all effates, and conditions of men; I would knowe why the meanes also of performing the actions belonging so the same art should not bee as common? And if it be ordinarie to all nations to fetch their medisines farre. I t'me know why, as we cease not to tras aellfor to fore vs with outlandish drugges, we carie not thither also our countrie medicines for change, its or they of those nations give not the like adventure for ours ? but they are contented with their owne Ph Ror , and fo ought we with ours. If it be not ordina. rie, why should it beemore extraordinarie to one then to an other. The most of our Apothecarie ware is brought from the most vile and barbarous pations of the world, and almost all from the profes

professed enemies of the Sonne of God : shall wer fay the Lord hath more care, or fetteth more flore by them then by his owne people ? that hee fe furnisheth them, and leaveth vs destitute? or shall we rather condemne the vapitie of our owner mindes, who volatiably defire strange thing sale ele regarding, or rather loathing that which is alwaies at commandment. But God (laith one) hath not bestowed all things upon all nations, but hath left some thing to bee supplied by the commodities wherewith one nation aboundeth, and an other wanteth, that thereupon mutual duties arising, the societie of men might bee vpholden. Which objection, if it carried with it what things they were, and of what kinde, that one nation supplyeth to an other, and what fort of commoduses they bee that one nation needeth the helpe of another in , a more direct answere might bee made then otherwile I may hitte vpon: But I gheffe it is neyther of water nor fire, nor of aire; nor of any thing necessarie for maintenance of life, otherwife should the native countrie of each one beerather a stepdame to vs then a patural mother : but it is of those things only which with healthfull, and luftie bodies we might bee without, if custome had not too much preuailed with vs. And to goe no further then to the vie of Wine in England, in many respects it greatly hurteth vs , yet our ordinarie vie thereof hath given vs such a longing thereafter, that we thinke if wee should want it, many of our daies were thereby abridged. Whereby notwithstanding thewmes are mightly increased, the finewes feebled

iled; the naturall moisture and heate of the boie ouerhastily wasted, and swift olde age brought pon vs, with an infinite number of discommoities belides. Which the nations finding where ee haue it, do to delay it, that rather they feeme drinke wined water, then watred wine, except ie Aged or such as are feeble stomached. And die ers nations which may have of the best, because ley would be fure to banish the vie of it, countit criledge to talte it : as the Turkes at this days ho vie in steede thereof a distilled water of Rice ceped in Milke, thereby supplying the vicof wine leyther doe wee finde this discommoditie of wine the abuse of drunkennesse or surfering onely it even keeping within the three cuppes that sbulus powreth out to wife men; whereof the It is of health, and nourishment: the tecond myrth, and toy of heart; and the third of fleep, that a draught or twaine doth maruellously dis nper out bodies : which incongenience wee finde it by our ordinarie drinke, yea, though it bee ongerthen wine . If I should compare our Mede the helt wine, and the Metheglin of the Welchen, with Malmeley, I could take great arguents from the nature of Honie to proue it; elcially beeing tempred with certaine wholesome 10 arbes, which have vertue to strengthen the parts : sit the body. And by experience it is knowne, that eje. mie mixed with water, turneth in time to a olelome liquor, in tifte much like to wine. ies. tereupon Pena in his Chapter of Honie, folio doubteth not to affirme, that the Mede of the lomans and Musconites, and the Metheglin of the Welchmen.

UQ:

Welchmen, are more wholesome and pleasant then many of the best kindes of wines, hee hit selfe beeing a French man, and therefore in his judgement leffe partiall. Wherefore to conclude this argument, sceing wine (which is the glorie of strange merchandise) is but an hurtfull superflu itie, the rest must needes bee farte other thes necessaries. But medicines being such as withou which our health and life runneth into infinit perills by caules inward and outward, through breach o diet, vowholesomenesse of meate, woundes, bi tings of venemous beafts, infections of the aire and fuch like, it followeth necessarily, that the beenot such as God would have one nation grate fie another with: which if they were, greater rea fon were it to charge the neighbour nations there with, that thereby their mindes might with per formance of such mutual dutyes so necessarie bee in ftraighter amitie and peace linked, wh ceale not for the enlarging of limites to vexe on another, rather then the nations to faire distan who have neither fellowship of loues nor quarre of hatred equall with the borderers. Neyther woul I be so taken, as though I knew not at some time that one nation hath neede of an other, euen i things necessary, as the supplie made by Joseph to h father lateb, and other nations out of the flore Accypt: but the controucific is of an ordinar courte, which the Lord vieth in bestowing his ble fings, wherewith he doth fully taushe the neede i all nations with things necessarie, lauing when I punisherh with famine or want of victualls, which is extraordinary in respect of his accustomed cour

of preferring his creatures. Now if the strange medicines (for the most part hotte) should feeme rather in the whole kinde, then by reason of aboundance, superfluous to them, and so more fit for vs, beeing of a colder temper: we are to conlider the vie of them is manifolde to the inhabitants, and not onely to warme them: as the Aethispians called Troglodires, although they bee parthed with vehement heate of the Sunne, are faid to live with Pepper, not to correct the diffemper of their bodies, which would rather increase it then diminish, but to correct their euill waters, and watrish fruites, wherewith they in part do live, Againe, wee are to vinderstand, that the difcale which is most agreeable with age, sexe, region, custome, complexion, is alwaics most laungerous, as ingendered by an exceeding vehemencie of the caule, whereto nature bath yeelled, and so requireth a like vehement medicine: wherefore if the Arabian, the Indian, the Spaniird, fall into colde diseases, or such as follow coldes so maruell though nature hath ministred voto them lentie of strong wines and spices, which the Norbren nations neede not. Who as they bee more ipt to fall into fuch diseases then they, their temper hereto agreeing, the aire and region furthering the ame, to are they not thereof to dangeroully licke is they of the South countries, and therefore require not so torcible a medicine. But I minde not to stand to shewe the vse which foreigne nations haue of their commodities, let them fee to it. Hitherto bath beene shewed, both that they be surtfull vnto vs, and that it is not ablurde for hot

regions to abound with hot simples, the vie o them being divers both in respect of curing their bodies, and other vies without the compasse of Physicke. These be the reasons which moone mer to suspect the vie of strange drugges, and drive me to thinke, that Nature hath better prouj ed for vs and as the Indian, Arabian, Spaniard, have their Indish, Arabian, and Spanish medicines, so also the Germane hath his, the French man his, and the English man his own proper, belonging to each of them. I know gentle reader nothing doth more hinder the accepting of truth divers times, (especially with fuch as fee with other mens eyes) then the person of him who first propoundeth the matter, be ing taken rather to bee an opinion of one, then ar yndoabted truth to be cherished of all, as who have interest therein. Wherefore that such might be fatisfied, I will adde to my former reasons taken from thenature of the thing, the authoritie of moe doctours then one, who agreeing with this which holde, may be a meanes to drawe the gentle reader the more seriously to consider of this matter, and truth may take some strength thereby, and winne the more credit. Plinie in his foure and twentie Booke of his historie, and first Chapter, hath this fentence, thus much in English: Nature would that fuch onely should be medicines, that is to say, which easily might be come by of the common people: easie to be found out, without charge, taken from the things whereby we live: but in processe of time the craft of men, and fleightes of their wits, found out these shoppes of strange drugges, in which a fate of mens lives is offered, whereupon confections

1

lions, and infinite mixtures beganne to bee extolled, India and Arabia a man would thinke he were in them, and for a little gall or small vicer, a medicine must be fetched from the redde Sea : whereas cuerie day the poorest doe suppe with true medicines. And in his two and twentie Book and foure & twentie Chapter, We doe not meddle (faith he) with the medicines taken from the marchandise of India or Arabia, or of the new world, they are not fit for medicines and remedies, they growe too farre off, they are not for vs, no, not for the nations where they growe, else would they not sell them away. It wee shall needes vie them (faith hee) let them bee bought for sweete perfumes, and sweete oyles, and dainties, or to serve superstition, because when we pray we burne Frankensence and Costas. And thus much out of Pinie; whole judgement as it is auncient of a 1000, yeares, lo is it of him, who most diligently sought out the mysteries of nature, and published them for the vie of posteritie. Now if haply it bee obieded, that Pline might well verific that of Italie which England can not performe, weemust vuderstand, that Plintereasoneth from nature, which serueth for all nations of the world as well as for Italie, and directeth his penne not onely against the medicine strange to Italie, but even against all that are faire fetched and dearely bought, as appeareth plainely by his words. To this sentence of Plinie, I wil & adde the judgement of two Phylitians of late time, east Plinie beeing no phylitian, should be thought an vosufficient testimonie. Fuebsus in his first Book of compounding of medicines and 76, Chapter, thus.

thus agreeth with Plinie. If we were not so carried 24 way with the admiration of strange things, and were the not fooles (faith bec) who had rather vie medi- on eines fetched from strange and farre countries, con- le temping our natine Medicines) then such as grow | m in our gardens: we might make Honie serue in steed it of Manna. But with the exceeding cost and charge in which those medicines put vs vnto, wee are wor- Ph thily punished for our folly. Loe, heere two witnesses, the one a great Philosopher, and the o. tho ther both a Philosopher and a Physician, compara- det ble with the best of late daies; a double become a me

The third witnesse with Plinie and Fuchfins, is dan Martine Rulandus, to whome the students of Phy- in ficke owe much for his Medicina practica, and o- of ther workes. This Rulandus in his prefice to Me- bee dicina practica, hath these words : thus in English: tho Wee have simple medicines (easily had, homely, of our owne countrie of Germanie, to be bought | will with little monie or none at all) : ready (faith be) |mr. and intreated of in writing, by which onely all kinds | med of diseases are certainely and vindoubtedly cured, tho oftentimes better and much more eafily (beleeue resson and experience saith hee) (and that with no burt or danger) then with the long compoundes of the Apothecaries, which are costly, euillgathered without knowledge of the Physician, oftentimes vuperfectly mixed, and ynskilfully confused, and as vaskilfully boyled, oftentimes putrefied, and by age of force wasted, slovenly and with great negligence confected. In which words Rulandus. briefly hath comprehended in a mainer all the difcommodities of strange medicines.

Thefe

and

These testimonies I rather have alledged, gentle reader, that thou mayest knowe this my opinion is not mine onely, and new sprung vp from the leasure of a student, who might easily be ouertaken with a speculation which never could be showne in vse and practise, but hath with it the voice of authoritie, and suffrages of excellent Philosophers and Physitians, although they have not of purpole and in a fette treatise handled this argument, as h thou teeft : which notwithstanding contayneth indeede the matter of a great volume. Hitherto hath beene stewed the great inconveniences and dangers which rife of the vie of strange medicines, by reason, by experience, by authoritie of Philosophers and Physicians. If my reasons bee cuill gathered, the experience falle, the authoritie not authenticall, what have I loft thereby ? a fewe houres meditation, and a fewe lines writing, or my credite impaired will some say. If my credite could eyther buy such vertues to strange medicines as they carrie the name, or purgethe shops of counterfer stuffe, or redeeme the harmes they have done, I would verily efteem as much of the chaunge; as hee which made exchange of brasse for golde. Although I weene it be a proprietie to mans weaknesse vnauoidable of any, to erre, and therefore if obstinacie be not therwith coupled alwaies found pardon. But if my arguments rise from the causes and effects of these foreigmers, and causes and effects of our bodies, which are of all arguments the most forcible to establish or ouerthrowe any thing to bee decided by reafon, and the authorities such as justly exception le HE

Am

in ;

cannot bee taken against : blame mee not (gentle reader) though I bee carried into this perswafion my selfe, and of a loue and zeale to benefite thee, hauepublished that which I have conceived of this Argument. If I bee deceived in my judgement of strange drugges, (which I wish with all my heart I were) these reasons, the woefull experience, the authoritie of fuch men haue induced me. All which if they may bee answered, that which seemed morethen doubtfutl before, shall by this controversie shine most cleare, and truth as it were wrought with the fire of reason, receiue greater strength and perfection. Thus much touching the mable neffe of ftrange merchandile to performe unto vs sufficiencie, yea, any measure of medicines, as belonging vnto vs properly, and the discommodities of them. Now if strange medicines serne not our turnes, and all medicines bee eyther strange or home boine, it must needs followe, that the home medicines are most naturall and kinde to va, except a man would say all medicines bring harme vnto vs, which is not of the nature of a medicine, being an instrument of pertourming remedies voto vs: or if it were fo, yet have wee this by experience, that strange medicines doe more annoy vs then strangers, yea, deflrov vs , and restore them : wherefore home medicines and of our countrie yeelde, of equitie must necessarily performe the same to vs , which their medicines docto them. Elle I would knowe why we should bee inferior vitto them, or one nation more priviledged that way then an other, the neede beeing common, and the providence of God

á

į,

1

8

H

all one yea such as rather then remedie should neede the chariot of the Sunne to fetch it from one end of the world to the other, or be so farre to seek as our common drugges are, he hath linked the remedie in many things to streightly to the cause of our burt, that even the selfe same which harmed vs, carieth withit amendes. As the Scorpion rubbed vppon his stinging, cureth the same. Likewise the Ranie divided & applyed hot to the wound, cureth her venemous biting, and so the Passinaca marina as it bringeth most dangerous hurt, it refuleth not (being thereto applyed) to ministerremedie. Which practile of nature might verilie moue vs to thinke her meaning is not to fend vs either into Arabia or India for aide of our griefes, but thereby to commend her care vnto vs, and give occasion of praising Gods providence, and flirring vs vp to make diligenter fearch into our owne prouition, and to take better triall then wee were wont of the lame. Wherein the great liberalitie of Godappeareth in such large measure, that rather superfluitie then sparing may be noted herein; in that both one simple nature carrieth with it the vertue of many medicines; and many simples, remedies against such diseases as wee might bee thought like neuer to bee subject vnto : and such things as in respect of their nature might seemevile vnto vs, affoord vs (beeing skilfully applied) most fouereigne medicine: whereof for a tafte I give two or three examples : Milk is either to be confidered in all the parts together, or them seuered. All kind of Milke boyled, especially burned with stones taken from the sea shore, helpeth all inward vi-CCIS,

cers, chiefely of the lawes, the lungs, the guttes, the bladder, and the kidneyes, it is good against the itch and wheales, and it helpeth bloudie flixes. New Milke is good against frettings made with poylons received inward: as of cantharides and fuch like: it is profitably gargled against swellings and frettings in the lawes. The whay of Milke is good to purge the bodie, especially of such as bee melancholike, and disposed to the falling sickenesse, leprose, and breaking out with scabbes. The cheesie part of it. as curds, fresh without salt, softneth the bellie, which pressed and broyled stayeth the laxe. Cheese laide on, helpeth the inflammation of the eyes. The butter of Milke drunke, softneth the belly, and ferueth against poylon for want of oyle; rubbed vp. on their gooms with honie, helpeththe toothing of children, and cureth the itching of their gooms and soares of their mouthes. It helpeth such as are bitten of the serpent called Aspis. The soote of butter is very effectuall against watering eyes, and fwiftly skinneth fores.

Wj

Said

Thus thou feelt reader what treasure is hid in Milke (even an excrement) beeing vied both whole and in partes. That which I have faid of Milke, belongeth alfoto most of creatures, which both all ferue for medicine, and each of them for fundrio purposes. Whereby Natures endenour to furnish vs with all helpe of medicine may evidently appeare, yea, most of all when shee seemeth to bee so icalouse over our health, that shee provide thagainst Dryinus, against the Scorpion, the viper, and Cerasses, and the most of venemous bitings of Serpents, wherewith notwithstanding we are not as on

ther nations encombred, and those not common, medicines onely, but euen proper vnto them. As the venome of Dry/mus is abated and vtterly extinguilhed with the Trifolie, and with all kinde of mast, be it of the Beech, or the Oake, or of any kinde of tree that beareth Acornes, Peneriall cureth the Scorpions sting: against the byting of a viper, Garlike, Onyons, and Leekes newe gathered, are principall triacles: wher with also the venom of Ceraftes is ouermatched. Ergo, if Naturefaile vs not against the venomes of strange Serpents, from which we be freed by reason of the temper of our region, repugnant to their natures, (All things beeing done in the actions of nature in exquisite wisedome, & by a precise rule of Gods prouidence) much more are we furnished against the diseases bred in our bowels. What hath been faid of venemous beafts, may also bee shewed in the cure of strange diseases, wherein nature seemeth to be as carefull as in the other. The French Pockes is an Indian disease, and not knowne to this part of the world within this hundreth yeares, before that voyage of Charles the Emperour, which he tooke against Naples, where being brought ouer with the Spaniards which returned with Christophorus Columbus, who first discouered the West Indies, it hath fince infected the whole worlde. Now this strange & Indian disease hath nature provided remedie against, not only out of India, as the Guaicum, & Salfa Parilla, but even out of Europe as effectuall: as the Smilax aspera, wherewith Fallopius laith at Pifa he cured divers of the French pockes. And La Riviere in French his Apologie, affirmeth the same to be done with the essence of the Primrose and Coustip. The

The anountings with Mercurie are knowne by daily practifes what force they have, against this most grieuous disease, which although tome doe mislike, because vadiscreetly vied, it is somewhat daungerous : vet Antonius Chalmetens, a skillull Surgion, in the fift Booke of his Enchiridion and s. Chapter, affirmeth, that therewith hee hath perfeelly cured divers without daunger, and if it hath otherwise fallen out with some, that it hath rather proceeded of viskilfull ving, then by the nature of Mercurie. Now, gentle reader, thou are to understand the Pockes in India, being the same dilease with that wee call the French Pockes, is there a gentle discale, not much differing from the Scabbe, voyde of such grieuous symptoms as it bringeth to these quarters, corrupting not only the flethie partes of our bodies but euen the verie bones also. This testifieth Fallepins in his Booke of the French Pockes. Yet neede not our medicines craue the helpe of India for the cure thereof, no, not although it rage farre more fiercely (as it doeth) against ve then against them. Which being cuident, let vs confider how justly nature may bee blamed to fayle in the prouision of medicines. Scarce would a man looke for any great verrue of medicine in the wormes of the earth, being a creature fo abiect : yet ioyne they, and cleaue together wounded linewes, they cure tertians, they help the paines of the eares, the toothache, and the pouder of them dronke provoketh vrine. The little vermine called Somes, which being touched runne together round like a peale, who would thinke they cured the difficultie of making water, the Jawnes,

the Quinfey, for which purpoles they be of great force, and for to discharge stuffed lungs, with tough and groffe humorus, nothing may be compared. Likewise the cornes of horse legges called Lichenes, although they bee base and vile excrements, yet helpe they such as are taken with the falling sickenesse. The decoction of Frogges with falt and butter, is a triacle against the bitings, stingings, and poyfons of all ferpents, and the ashes of them burnt, stayeth the flux of bloud being thereto applyed. These base creatures the rather I propound, that beeing knowne, the treasures which Nature bath hid and layde vp in them, with such varietie of vertues, wee might, the better esteeming of her benefites, and the blessings of our owne countrie, bothacknowledge them, accept them, and bee mote thankfull vnto God for them. The which base creatures the viler they seeme to be, the more commend they the goodnesse of the Creator, who would not the abjecteft thing that is, should altogether bee without wherewith to serue, and doe homage to his Lord and maister: which if these things associate, what may wee iustly promise to our selves, and require of the rest more excellent creatures? Let not the reason seeme strange and weak to thee reader, who art a Christian, which is taken from the prouidence and wisedome of God, to proue the sufficiencie of his execution and performance of the lame. For if Galene thought it reasonable, (as it is most reafonable,) to gather the wisedome an I prouidence of the Creator by his work in the Creature & maintenance thereof, which he in the end of his bookes

of the vie of parts, calleth a poynt of divinitie, farre to bee preferred about the whole Art of Phyficke: much more reasonable is it for mee, and the reason sounder which is drawne from that dinine providence, to the practile thereof. And if Galene had that religion in him, beeing a Gentile; and groping onely in the mist of naturall knowledge of God, could not fatisfie himselfe with a Pfalme or Hymne (as hee himfelfe calleth it) of seventeene staves, every staffe contay. ning a whole booke (for thus hee himselfe calleth his Bookes of the vie of parts) of the wifedome of the most wile God, esteeming that dutie more acceptable voto him then sacrifices of an hundreth Oxen, or the most costly perfumes and incense; let it not bee harsh in thine cares gentle reader, to heare now and then the goodnesse of our God, his wiledome and providence, to bee both intreated of and aduanced of a Christian Physitian, and to Christians, to whome the sunne of right cousnesse hath thined and featterred those mists of naturall darkenetle, and hath given the earnest of immortalitie. And bee affured there is no truth in Philofophie, but may fland with, yearather may rest, and bee vpholden of Christianitie. But let vs proceede. Iulius Baffus , Nicerates , and Petronius Niger , as faith, Dioscorides, thought their countrie medicines, and those which their native loyle yeelded, most worthy to bee exactly intreated of by them, belike either thinking them sufficient for the inhabitants, or more agreeable with them. Which homely practife of the nations where he trauelled, Dioscorides confesses to have beene the matter whereof

沙山

whereof he compounded his golden book of medicines, which at this day remaineth a rich ftorchoule to all Physicians. Now then I would know why we should more bee prouided of medicine against one dileale then another, of our countrie yeeld? is it becaule such diseases which require firinge medicines are more dauagerous, or leffe tif more dauagerous then should the remedy for them be more at hand, then for other: if lesse, why are then the strange medicines esteemed as most forcible? and if we be leife Subject to such diseases as are cured with them, & lo the ablence of them may feeme tolerable, why then are tertian agues chiefly cured with Thamarines and Rhewbarbe? wherof the one commeth out of India, & the other for the most part out of Barbarie. What so ever nature is veelded to any nation, it serveth either for nourishment or medicines, or being Reyther nourishment nor medicine, is plaine poyfon. Now a subducction beeing made of each of thele, one from the other, what part shall we thinke wil nourishments leaue to medicines ? a far greater or-10doubtless then they them solves beil as they exceed nourithments, so greatly do they & beyond al comiod de. parison exced the poisons. Wherefore if the most of creatures in enery nation, be a fit matter of medicine, greatly no doubt are all nations stored with them: ocs, which store declareth, that as diseases partly rise of breach of dier, & partly through poilors, so Natura bewould furnish vs with medicines in nuber answersbi. ble to thecauses of both: which being not sufficient, ich argueth that Nature milleth of her purpole, having sufficiently declared her endeague: but Nature IGI alwaies bringeth her workes to perfection, except in case of monsters, which are not ordinary.

Wherefore her will, (the being an instinct of Gods) euer going with the execution thereof, must needs performe that to vs which the pretendeth in the varietie, But that thou maist (gentle reader) have better holde and greater assurance of the infficiency of thy countrie medicines, I willfet downe briefly according to the variety and forts of all difeales cured with medicine, medicines taken from our natiue soyle aunswerable ento them, and effectuall to cure them. And because medicines have relation to diseases, I will first touch the diseases, and thereto joyne the medicicines. All dileases are either in the complexion, or frame of the bodie, fychas are in the complexion are all cured by media cine ; which I named in the beginning of this treatise one of the instruments of Physicke. Of dileafes in the frame, these onely are cured with medieines; Quantitie superfluously increased, or dimi; nished : obstructions, ouerstraightnesse or ouerlargnesse of passages in the bodie. These are onely the diseases properly to bee cured with medieine: other diseases which rife of these, either of their owne accord vanishing by the cure of thele, or else to bee cured by surgerie, as evill figure and shape through want of proportionall quantitie, that beeing restored, the figure forthwith returneth; or if not, rather 13 to be cured with helpe of hand. And luxation of joynts, and cuill coupling of partes, if they rife of diftemper onely, that beeing taken away with medicines, returneth oftentimes with it good fituation of partes. Likewife, the fituation peruerted through diffemper, the complexion being restored, the other consequently do followe.

Now

Now, having declared in generall the diseases which onely require medicine; that everie disease may have his proper one, I will subdivide them more particularly, icyning to enery disease that medicine which thereto belongeth. The diseases in the she complexion are either in all the parts of the temper thereof, or elle in one or twaine. In the whole complexion are such as are ingendred of venemous causes: and those either ingendred in the body, or happening thereto outwradly they which are ingendered in the bodie, are Cankers, Leprolies, falling sicknesse, Suffocation of the matrix through nature corrupted, Swounings through corruption of Wormes ingendred in the body. And these bee the diseases of venemous coules bred in the bodie. Such as happen thereto by outward occasions, are either by poylon taken into the bodie, or by outward touching procured: taken into the bodie, as the poylon of Toades, Henbane, Nightshade, Hemlocke, Ratsof bane, Quicksilver, and fuch mineralls, and late of all infected aires causing pestilence, and Carbundes. Such as are outwardly procured, are either without woundes or with woundes : without wounds, infection passing from one to another, as the French pockes. With wounds, venemons bitings and stingjogs of beasts, as of Serpents and madde Dogges. And these are all the diseases said to bee in the whole temper of the bodie, which haung first shewed to be sufficiently cured by home medicines, in like manger will I prosecute the rest. And heerein (gentle reader) thou art not to looke I should set downe all medicines which our native

foyle is knowne to bellow voon vs for cure of thefe difeases, which would growe to an infinite volume, I heerein referring thee to the workes of those who of purpose have written of the nature of simples, and are authors of practife, but it shall Por I hope suffice for this purpose to picke out among ft | 18 / a great many, those of choise for these diseases. And first to begin with Cankers, which being not bo exulcerated burremayning humors, are cured (if of with any medicine) by the juyce of Nightshade, All all the forces of Endine and Succorie, with Agrimonie, with Saint Johns wort, wilde Clarie, called but Oculus Christi, the fiell of Snayles boyled, Crayfilles, greene Frogres, and to conclude, with all kinde of metalis and mineralls; and among them Leade, how to enerit be vied, is most louereigne. Don If it bee exulcerated, then heerein have the mineralls and metalls the citiefe place. To the exulcerate law Canker belongeth the Woolfe (which is nought the elle, but a Canker exulcerated.) The Gangrene mon and Speacelus, are cured by the remedies of the who Canker and Woolfe, the one beeing a degree of that an Vicer in which the partes begin to bee mortified, the other when they baue now loft life altogether. The leprosie is an universall Canker, and od for outward medicines requireth no other: among the inward; Plantine, Whay, Hedgehogs dryed and drunke, helpe greatly. And thus much for help Cankers and Leprofics, which as they be difeating seshard to bee cured by any medicine, so receive him they as great helpe by these our home medicines; Mon as by any of thrange countries! The falling fickes Pun nesse, it it be in such as areaged, and have been an long

ong diseased therewith, is a disease hardly or not at of all to be cured. But where it is curable, these mediof cines bee comparable with the best : the roote of of the Missless of the Oake, the runnet of an Hare, the Peonie toote, Enula campana, the scalpe of 2 Man, an Asse hoose, Hystope, the myltofan Horse, the tones which are found in the mawes of the fuft broode of Swallowes, fine leaved graffe, the inice of the Conflippe, the juice of Horehound with Honse. All suffocations of the Matrix are cured with Planine, Peneriall, Herbgrace, and by an infinite number of home medicines. Wormes and that infection, is taken away by Coriander feed, Colewort feed, Garlike, Wormwood, & in a manner with all bitter hearbs, with the juice of Purstane, with the fylings of Stags horne, little inferiour in vertue to that which is commonly taken for the Vnicornes horne. Peach eaues, Hyffope, Mints, Purstane seed. Thus much touthing medicines against diseases ingendred of venemous causes within the bodie. Now touching such he as happen by outward occasions and first of those that by mouth are taken into the body. Against which generally it helpeth greatly to drinke store of putter in fleed of oyle, with warme water or the deoction of Flaxe leed, Fenigreeke, or Mallowes, and herupon a vomits which done, Sothernwood, the root of Seahuluer, the leed of Mep, the juice of Horehound, for he feed of wild Rue, Walnuts, Turnops, Herbgrace, fine eaned graffe, with an infinite number of native melicines, expellthe poylon, and restore the patient. More properly to the poylon of Cantharides belong Peneriall, to Bupressuall kinds of Peares, and wonans milke : to the Salamander, Chamepitis, Sealoly

rootes : to the wormes of the Pinetree, fuch as cure the poylon of Cantharides: against the poylon of of the Toad, the rootes of Reedes and Cyperus: against the Chameleon, radish roots and wormwood: against Ephemerum. Affes milke or Cowes milkes hot: against Doryenium, Goats mike, Asles milk, Cockles, and Cray fishes: against the poylon of Aconitum, Organ, Hearborace, Horehound, the decoction of Wormwood. Against Chriander, Wormwood, falt broth made with a Goofe or Hen, which expell also the poylon of Flewert: the poylon of Hemiocke is cured with Mint, Hearbgrace, Nettle feed, Bay leaves, which also cure the poyton of Vgh, and Carpafus. The poylon of that kinde of Crowe foll foose, called Sardonia, is cured with drinking store of Mede, and Milke: Henbane with Nettle feede, wilde Endiue, Mustard I ede, and Rocket: Cearuse, with Mede, hot milke: Peach stones, with the decoction of Barley, with the decoction of Millows: Quickfilner, with store of Milke drunke. Mercurie Sublimed with Crystall : Lime, Orpiment, Ratibane, and such like, with the decoction of Flaxe scede, and Milke with Mede, And to conclude this point, there is no kinde of poylon, but it finderh sare by our countrie medicines without borrowing. Thus much for the cure of poylons taken into the bodie by eating or drinking of them: Pestilences are cured (if with any medicine) with Angelica, Carduas benedictus, Arlnike, worne about the bodie, the roote of Pimpinell, of Tormentil, Hearbgrace, Setwall, Walnuts, the pouder of S. Johns wort, Juniper berries, Veruen, and the chiefe of all, the noble fimple water Germander, and the Duarfgen. \$4478.

ki,

ot

of

tian, For pestilent sores and Carbuncles, Scabious, Ofbit, Lousestrife, and the Marigolde: to the pestilence may bee referred the small pockes and such like, which agree in medicine also with the pestilence. And thus much for the cure of polsons. Against bitings and stings of venemous beastes, and poyloned weapons, there are also both generall and particular remedies. The generall are these: the ashes of the cuttings of the Vine and of the Figge tree, with Lee, Leekes, Onions, Garlicke, the Sea water, mustard seede, Endiue, Heth, the roote of the Sea Huluer, Bay berries, Hearbgrace, Dill, Sowse breade, Fenell, Peneriall, the runnet of an Hare, the Wefell, and these generall: particulars, are such as follow. Against the bitings of Phalangium, the seede of Sothernwood, Aniscede, the seede of Trifolie, the fruite of Tamariske. Against the Scolohel pendra, wilde Rewe, Thyme, Calamine : against the Scorpion, Basil seed : against the biting of a Viper, Adder, Snake, &c. Sothernwood, Bayes, green Organ, the Bramble, the braines of an Hen, Cole feede. Against the bitings of a madde Dogge, Crowe garlike, the river Crabbe, Balme, an actuall cauterie, the liver of the madde Dogge broyled, the bloud of a Dogge drunke. And thus much for the bitings and stingings of venemous beafts, which also serue against poysoned wounds, elle to be cured with the medicine which respecteth properly the poylon wherewith the weapon bath beene infected. The infection without wound is the French pocke, whereof (sufficient hauing beene saide before) I will heere say nothing. This

This then shall suffice to have written of the cure of all diseases rising of venomous causes, wherein (if Nature of her owne accord as it were, and in this great neglect of our Country & native medicines) hath shewed her selfe so liberall, how large would shee be, if with sette purpose and carefull endeuour greater triall of things were had, and proofe made by learned and discreet men. Now follow the diseales which are by the excelle or defect of one or two parts of the temper, which are hot, cold moift, and drie, simple or compounded: which if they be not procured by cuill humours, then require they altering onely by contrary qualities. If by them, as fleame, choler, melancholie: then are these humors first to be avoided and diminished.

Such as require altering, are cured by natures of contrarle qualitie, not onclie generally, but euen answerable to all degrees of excesse. And first to beginne with hot dileases of the first degree, they are cured with such contraries as follow: Barley, sowre Grapes, Roles, Violets, the Oake, Quinces, Damfings, Pellitory of the vvall, Docks, Peares, Apples, Hartshorne, the flowers and whole hearbe of Mal-

lowes.

Of the focond degree; the vvater Lillie, Ducksmeat, Knotgraffe, Vine leaues, the Bramble, Plantane, Cheries, Lead, Cerusse, Barberies, Covycombers, Mellons, Gourds, Citralls, whites of Egges, Medlers, and Services.

Of the third; Purslane, Housleeke, Mandrake, The while the bride I come above from the

Henbane.

Of the fourth; Hemlock, Poppie. Thus much for hot diseases.

Medi-

Ga

Ho

Ge

lon

&c

pill

two

cip

oft

tou

Medicines for cold diseases, are these hot which follow. Of the first degree; Buglosse, Borage, Fumitorie, Sage, Horsehoose, Maydenhaire, Butter, Lillies, Flaxe-seede, marrow and fat, Chamomile, Fenigreek, &c.

Of the second; Dill dry, Mugwort, Parseley,

Saffron, Honie, Balme, Salt, &c.

la of The third; Anile, Polefoote, Calamint, Commine, Fenell, Hystope, Mints, &c. The fourth; Garlicke-cresses, mustard, Celendine the great.

For moist diseases these medicines are good; Of the first degree dry : Cabbage, Beetes, Chamomile, Fenel, Beanes, Fenigreek, &c. Of the second; Dill, Mugwort, Shepheards-pouch, Doddard, Lintils, Hony, Rosemary. Of the third; Wormervood, Germander, Hyssope, Juniper, Fine leaned grasse, Organ, Horehound, &c. Of the fourth; Garlick-

cresses, mustard-seed, wilde Rue.

Dry diseases haue these medicines, Buglos, Malowes, Turnops, Endine, for the first degree. The second; Violets, Water-lillie, Lettice, Purselaine, &c. The third, and fourth degrees, as these are euill supplied by strange simples; so are they recompenced by increase of quantities of moyst in the two first degrees. And thus much touching medicines belonging to the cure of diseases in one part of the temper, which beeing in two parts, and without humour, require either temperings the simple qualities aforesaid, in diuerse simples, or natures wherein such two do exceede; which because they be as plentifull as those I have before mentioned, and that heereof none makes doubt, I will not touch. If this double distemper rise of humor, as for the most part of it doth: Then is that humor to bee diminished or altogether to bee voyded out of the bodie, and then the distemper remaining to bee altered. The humors are properly to bee voyded by purgation, other waies there bee diuers: as exercise, fastinges, sweating, vrime & fuch like. But properly the vacuation of steme, chooler, melancholie, which are the causes of this double distemper, belonges to purging medicines: which purgations, as the greatest doubt is of natures prountion in them, so they beeing suppliced by our countrie soyle, the greatest part of this

controuersie may seeme to bee decided.

Purgations are eyther by vomit, or by ftoole: by vomit our native soyle ministreth great choice, as, verie gentlie, the radiff rootes with the feed; the pepon roote and nettle feede: with morevehemencie, solefoote, leafe and roote, the middle barke of the wall nutte tree, and the long blofsomes thereof: and yet most vehemently the seedes of broome and the flowers thereof: and theie for vomit. By the stoole, and first to purge choler: the flowers and leaues of the Peach tree, Violets flowers and seedes comparable with Rheubarbe, the great garden docke called the Munkes Rheubarbes Damaske roles; wilde Saffron, the pouder of Fetherfewe, all the kindes of spurges, the root of the wilde Cowcumber, the roote of Bryonic, and Coloquintida. Melancholie is purged with Colequintida, the oke fearne, the juice of Mandrake, the flowers of broome, bearefoote, and Antimonie. Fleame and water are purged with Coloquintida, the inice of Rhineberries, the groffe

C

barke of the Elme, the juice of the root of Walworte, of Elder, the gardine Flowerdeluce roote inyced. The dry leaves of Laurell, the seawythwind, scurby weede. These are a showe of our Enlgish flore of purgers: which if they bee too strong, then are they to bee ministred in smaller quantitie mixed with those of feebler working; if too weake, then are they to beesharpened with quicker. If they offend any part, they are to be corrected partly with cordialls, and partly with medicines respecting such partes as they annoy. Which wantes are not onely to bee charged voon our countrie medicines, seeing even the best of foreyne purgers are to bee touched with the fame. As scammonie is corrected with quinces, otherwife troubleth it the stomach with a griping and gnawing, it purgeth ouer vehemently, it hurteth the liver, and is enemie to the heart, and doth exulcerate where it passeth, and procureth dysenteries, that is to say, vicers in the guts. Turpeth is corrected with ginger and long Peper, Mastich with oyle of sweete Almonds, and Suger, else ouerthroweth it the stomach, troubleth, & ouerdrieth the body. Coloquintida with oyle of lweet almonds, goom, tragacant, or mastich, else troubleth it vehemently the whole bodie, procureth the bloudie flixe, and miserably tormenteth the guts. So, Agaricke requireth to be steeped in wine with ginger & cloues, yet scarce abstaineth it from ouerthrowing the stomach. Cassia marreth the stomach, and requireth to bee mixed therewith Romach medicines. The excessive drinesse, and binding of Rheubarbe is corrected with some moystening syrope. Aloe requireth Mastich and Goome Trageacanth to mitigate the fretting thereof. Sene marreth the stomach, and either through windiness, or through vehemency of securing, tormenteth the body, and therefore needeth Ginger, Cinamon, or Spike, sweet

di al propriet

10

01

Ci

Prunes, fatte broth, and Raisins.

Hermodactiles offend the stomach, & cause winde, and require Ginger, Cumine, or Spike: and to be short; there is no purger of strange drogues which requireth not correction of great faults; which correction is taken fro such medicines as respect those parts chiefely which the purgation dooth annoy, whereof such is our store, that in all parts we be sufficiently armed therewith. But of these shall heere-

after be spoken.

Now, if any man thinke, for want of Cassia, Manna, Sene, Rheubarb, these humours cannot be voyded, or not so well; let mee then knowe how the Grecians wanted them, and yet found no lack, vling onely Scammonie, Helleborus and Colocynthis, Aloes, and Agaricke, for their chiefepurgations: The o. ther beeing brought in of late in comparison, by the Arabians; vvho both in knowledge of Phylick, and in the works thereof, were farre inferiour to the Gracians, to whom I say (I meane the ancient of them in Galens time and before) neither Manna, nor Calina. nor Sene, nor Rheubarbe, nor Hermedactiles, vvere known either at all, or at the vttermost for purgers. And as for Manna, Fuchsius saith, that certaine hauing beene about the Mount Libanus, made report that the inhabitants of that mountaine, having eaten their fill thereof, neither feele themselues any whit troubled there with, nor their bodies loofed,

but vie it for an ordinary sustenance. Whereby again appeare the agreat diversitie of working of strange medicines according to the variety of countries. But what should wee say of the nature of purgers, it is doubtlesse one of the hardest points at this day in all naturall Philosophie, neither minde I at this present to dealetherein: but this may I say, as by preparation, one nature may according to the varietie thereof, receive diverse, yea contrary vertues; so seemeth it to me that this vertue of purging may be procured to natures of themselves destitute there

of, by preparation.

17

Diverse and in a manner all the metalls, and mineralls, beeing burnt and washed, give over their fretting nature, and quickfiluer (which of it selfeit is not sublimed, or precipitated) becommeth a vehement scouring medicine: so likewise Antimonie, before it be turned into glaffe or oyle, is not known to purge the bodie : which beeing done, is greatly commended against the Dropsie, the French pocks, melancholie, and diverse other diseases, vyhich it cureth by purging. So that it seemeth, art of preparation, as it maketh no nature (that beeing a vvorke of the valuerfall nature) so may it not onely bee a preparer, but euen a maker of medicines: vvhich medicines are not natures, euen as health, and ficknes are not of the nature of mans body, but euen accidents thereto. who have bearing with

Which being certaine, let vs then confider what an infinite variety of medicines wold arise of things, the same being vsed not only entire, but diversly prepar'd & even corrupted: wherin the industry of Alehmiss.

is verily greatly to bee commended, and farre more excellent then the common Pharmacopolia rather so to bee called then Pharmacopolya, by the skill whereof diuerle natures in one thing are so exactly severed, every one having a diverse operation. Now ofttimes because the humor to bee purged is groffe and tough and so hardly yeeldeth to the medicine, or bath some other cuill qualitie wherewith it might greatly hurt the partes, whereby it passeth; nature not forgetting this point, hath as aboundantly supplyed such helpes in this behalfe, as neede requireth: as for the preparing of choler, Plantaine, Roses, the verdinice of the grape, endine, suchorie storel, sperage, &c. For melancholie:violets, borage, buglosse, baulme, fumitory, doddar, ceterach, or fingerfearne, &c. For fleme: fenel, perfely, becomie, neppespenerial, thyme, sauerie, germander, &c. Of these I lesse stand spon, because the preparers of humors are least in controuersie, although from hence may an argument bee drawne not lightly to bee passed ouer, to proue the flore of purgers, seeing nature bath miniistred sufficiencie of preparers, and as it were harblu gers to the purgers of countrie yeelde. But I wil drawe to an end : and thus much shall suffice for this present purpose to have said of medicines, belonging to the cure of all diseases in complexion. The other kinde of diseases are in the frame of the body: and of those, if quantity bee superfluously increased, and that in the whole body, medicines which do vehemently waste, as those of the third degree hot, diminish the same, If in the part onely, medicines which we call eaters, and fret70

ters, dispatch the same : as coperous, the ashes of purge, burnt alum, mercurie sublimed and precipirate, verdigrece, burnt salt, &c. If measure be diminished, and that without losse of substance, the of glewing medicines bring cure: whereof our native toile is so stored, that for wounds, the Surgions need meither to fend into Barbarie, nor India: as Plan-Lane, Hounds tonge, the flowers and leaves of willowes, yarrow, carduus benedictus, betony, scabious, veruen, elmeleaues, adderstonge, moone worte, hearbe turpence, Selfe heale, and these if the wounds bee in the fleshie partes. If it be breaking of bones, such are joyned with fine flower, the brayne of a dogge, with woll, and the white of an in egge, the holyhockeroote, the moste of the oke, glewe, roses, worme woode, &c. If there be losse of substance in the fleshie parts either by wound, or vicer, Incarnatives fayle vs not: as barliemeale, in fenegreeke flower, figbene meale, and to bee short - all fuch as bee of the first degree hot and drie, with-10 out egernes or felnes. Now the diseases in straightnes of passages or obstructions, if they arise of the humors afore faid, and in those places whereto the medicine may conveniently come, then are they to be fette free by purging. If vpon other causes, or in fuch places whereo the force of the medicine which n, purgeth cannot come, or hardely entereth, or of he fuch causes as be no humors, but through some other strange matter, or by straightnes of the velfells, wherethough the passage is, then are other of remedies to be yeed whereof we have great plentie, he as fortners, loofers, and fuch as docenlarge the pores of the bodie, of which force are such as bee

not aboue the first degree hote: as Chamomile, Lil. lies, new butter, Swines greace, Linfeed, Fenigreek Brionie root, all marrowes: Also medicines which make the matter thin, or cut it, and divide it into fundry parts, of which fort are they of the second de gree hot to the third degree, as Dill, Peneriall, Sa uerie, Organ, Thyme, Marioran, Saint Iohns wort Worme-wood, &c. Now, if the humour prepared be to be voided by place medicine, then falt, falt was ter, Lie, Ashes, Alume, and Lime, take place; and if more vehemencie bee needfull, Calamint, voile Cresses, Triacle, mustard, Garden Cresses, Mustare feed, nettles, dragons, all the fourges are to be num. bred among the best: and if these serue not, the roo of Crowfoot will make the supply. If the humour cannot be voided conveniently, except it be altered into another matter, of which fort is pent bloud ou of the veines, then are ripening medicines first to be applyed: as butter, whear-flower, Sorel, Horsehoof Lillies, Marchmallowes, Onyons rofted; which all are fingular ripers. If the matter be rough & clammie, these scourers anoyd that inconvenience; Endiue, Suchorie, Red-roses, Plantaine, Houseleeke Agrimonie, Betony, Hony, Horehound, Worme wood, Baulme, Pimpernell, Watergermander &c. Now, if the matter which stoppeth be the stone as in the kidneyes, or bladder, then are these medieines most convenient for that vse: Grummell seed. Goates bloud, the juyce of Mugwort, Seahuluer. root, the stones found in the great snayles beads, radish roots, Saxifrage, &c. If any hard matter be in other parts, the fofmers and wasters & disfoluers are to be applyed. Thus

Thus much touching the cure of obstructions nd straight passages, which according to the variee of place where they light, cause sundry diseases, rather take to the fundry names. As in the braine, de he Apoplexie; in the bladder of Gall, the yellowe Salawnes; in the Splene, the black: in the lynewes of of notion, the palley or trembling; in the lungs

Athma, and so foorth.

Now, if these passages be too large, they are to be and topped and streightned with cooling and drying nd aedicines, of which fort in a manner are all of tharp and fowre tafte; as Vine-leaves, the Brier, and the iramble, Barbaries, Medlers, and Seruices, Quin-1001) es, & fuch as are of themselves, or by mixture with iquor clammie, as wheat flower, beane flower, the white of an egge, plaister, washed lime, Litharge,

out nd Cerufe.

Now moreouer, because in all good cure, not of mely the cause of the diseases is to bee oppugned, out the part also to bee strengthened, which must m- reeds (partly by the cause of the disease, and partly even by the conflict of the same cause with the melicine) be feebled; that nothing be wanting vato vs or the restoring of health, nature hath prouided eten special munition for every part of the body, hat the whole furniture against all diseases might be complete. As for the head, Aniscedes, Folefoot, d Betony, Calamint, Eyebright, Lauender, Bayes, Marioran, Piony, Sage, Rew, or herbgrace, Lettile, the leaves and flowers of vvater Lillies, Roles, garlen nightshade. For the lungs, calamint, dragons, lioras, Enula campana, histop, linfeed, horehound, the lúgs of a fox, icabious, water germander, barly, garde poppe,

poppe violets, horsehoose. For the heart, bu glosse, borage, saffron, baulme, basill, rosemary, violets, the bone of a stagges harte, roses For the stomach, wormewood, mints, betonie baulme, mint, quinces, medlers, Sorell, purselane For the Liuer, Dartspine, or chamepitys,, ger. mander, agrimonie, fenell, endiue, suchorie liuer worte, barbaris. For the splene : Maiden heare sperage, fingerfearne, dodder, dodder of thyme hoppes, the barke of the ash tree. For the kidnies : Sea huluer, Grumel, Parfeley, Knecolme faxifrage, Mallowes, Plantane, Pellitorie of the walle. For the wombe: mugwort, peneriall, fee therfewe, sauine, walwort, Juniper. For the loynts chamomile, saint Johns wort, organ, rue, multen and coweslips, the lesse centaurie, and chamepitys,

Thus have I (gentle reader) briefely run over the difeafes cured by medicine, having passed by those which eyther rife of thefe, as euill figure by immoderate excelle, or defect of quantitie, vnequally in. creasing or wanting, or number, euill situation for want of good couplance through distemper, & such like, as also the compounde of those, which require (onely composition excepted) the same medicines Whereby euidently maift thou lee, the goodnes of God towards thee, in so plentifully furnishing thine owne soyle with such varietie of medicines; which if it yeeld thee such plenty in this neglect & lothing of our countrie remedies, what fruite wert thou to looke for, if diligence and paines were vied? Verily right well might wee both auovde the danngers before declared, case our selves of immoderate charge, and have better assurance of our medicines

then

hen wee haue : yea verie well satissie our daintiels euen with strange simples, or finde out such s should not only in vertues match with the spices f India (which is a plaine case) as Rosemarie matchth Cinamon: Bafill, Cloues: Sage, the Nutmegge: afforn Ginger: Thyme, Muske: Sauerie, the leafe alled Malabathrum, but euen in pleasantnes of tast spresse the same. And as Auens doth most finely reresent the taste of cloues voto vs, so likelie is it fearch were made, and this enterprise of examihis o more be destitute of spices then India or Arabia, though neither Indish, nor Arabicke : and as the nall lagges of the rootes of Auens, faile little om cloues in tafte, so might wee as likely find that hich were little inferiour to Cinamon, ginger, nutthe tegges, and mace, not onely in likeneffe of woring, but even in similitude of nature: but I will reme tre this to that time, when either men shall bee ore carefull for publike benefit then private gaine, fufficient allowance bestowed on such men as old spend their daies only insearching out the veruse les of natures, which at this time is greatly waninding, even as for all other professions of artes. Our sof aglish soyle is greatly commended, as it instly ferueth, for temper of the aire: & of such as have perience thereof, of frangers, and great masters fumples, for varietie of excellent medicines careth great praile, who report they finde such sim-Vales in the valleys and woodes of our North parts, they finde in the toppes of mountaines in the outh countries. So that certaine gardines in Engad, especially in London, are able to affourd great

varietie of medicines euen of forraine simples to al diseases. And if the Diztany of Candie, the Cipre it tree, the Nicotian out of India, Coloquintida, the Micotian out of Silver in the Pomegranate tree, will brook out of Silver in the India out of the India out of the India of

charge and leffe danger, for all diseases.

Now, if it bee demaunded, vvhy then both the practile is, and hath been hitherto otherwife; I will the onely say thus much for answere, although mucifuld more might be faid: The whole art of Phytick hat him been taken partly from the Greekes, and partly from all the Arabians. And as the precepts of the Art, to like wife wife the meanes and instruments wherewith for the most part the precepts of the same art are executed which bath bred this errour in times past, now by little tradition received, that all dutie of the Physicia ym touching restoring health, is to bee performed but the same remedies, not in kinde onely, but euclid specially with those which the Grecian and Arabianum Masters vsed, who wrote not for vs, but for theiling Greekes and Arabicks, tempering their medicines tolen their estates, although their rules be as common alten reason to all nations.

he gives the rules therof no more to Germans, the to Boares and Beares, but to the Grecians. Which to Boares and Beares, but to the Grecians.

declareth, they respected their owne nation both in multiple and medicine; whom also the arabians in the

the ame poynt followed.

Now, we receiving the same medicines with the cule, must needs fall into the absurdities afore-saide: a Much like to the euil Musitian, which playeth one-carry y pon the instrument whereon his Master taught main, which if he assay you another, committeth of liverse discords among other euill graces in mulick. But the wise and scarned Physitian, being sur-carrismore generall then his owne, they hereto naturall philosophic most nighly approa-

heth, beeing a knowledge of all naturall things, not the f Arabia, or India, or Greece, but vniuerfally, findwith in all Countries medicines for diseases, nature nutreelding sufficiencie of contraries to all forts of hem, wherto the inhabitants are subject, at the least, from nall quarters, which rife not of a blinde tradition, hebut from a certaine knowledge of nature. This then take to be the chiefe cause of this custome in ving und trange medicines, which ignorance of nature doth bracele, & nourish daily. I blame none, neither tax I ainning man, & I dare fay there is not a learned Physitian dhin this land, who is not able to performe this poynt me with English medicines, if they would take the mater in hand : whereto I rather exhort them , then inthis truct them, beeing a thing sufficiently known vnto isto hem. For it is not the Nutmegge, or the Mace that mattrengtheneth the braine, and cureth cold difea-

es, and moyst diseases thereof: but a drying and rarming vertue, with a secret agreement which they all a with the braine to preserve the same, which cing found as sufficient in Sage, in Rolemany, in Betony

Betony and fuch like the nutmegge and the mace, with such otherspice, for that turne may bee discharged. The same may bee said of all strange natures, which although wee want, yet have we fuch as are as sufficient to serve in steede : for as everie nation hath apeculiar condition of the same difeales, so must the medicine also needes bee of another fort: and as the medicine varieth, so why the matter of the same medicine should not also varie I knowe not. The medicine varieth in respect of the complexion of the patient being other in one country, then in an other : which medicine is as it were feated in nature, which hath many qualities besides the medicinable, which qualitie if the medicine be good, must agree with the patients complexion; if not, then hurteth it greatly. If it agreeth with the complexion of a Moore, an Indian, or Spanyarde, then must it needes disagree with ours, which disagreement and want if it bee patched vp vnto vs by correctours, yet declareth that patching, that the medicine is rather by force constrained, then naturally veeldeth it selfe to the remedie, and so of it selfe vomeet. Wherefore as well the matter therof 10 to be changed, as the medicine it selfe. And if those correctors neede also correction, what then? I will not say that all simples neede their correctors, although it be anouched of some, and such as carrie great authoritie for their skill in Physicke. Thus haue I (gentle reader) for thy benefite I hope, made a way to the greater vse of our home medicines, wherin if I have faid freely my mind against strange drogues, thou maist understand that otherwise the way were Ropped to our English medicines, and PARTIE

blame me not, if I say asmuch for ours, as the strangers lay for theirs. And if as yet by custome it seeme hard to alter the common course, let each practicer looke to that, I set no lawes to any, offely I craue libertie in this point, both pleasant a profitable to English men. Wherein I have examples of excellent Philosophers & learned Physitians, neither broach I any idle conceites of my ower. Of this mind is Plinius Secundus, Fuchfius, Rulandus, Symphorianus, Campeonis, Octavianus Horatianus, Phylitian to Valenginian the Emperor, that all countries have sufficient medicines for all diseases. I know much more might be faid of this point. But this I thought sufficient for the present time, breaking as it were the yse I hope to others, who hereafter shall more copiously deale in the fame argument, or at the least, drawing the first lines (of a more large treatise to my selfe which as leasure, and opportunitie shall serue may hereaster be accomplished) this gentle reader I defire thee to accept in such fort, as I offer it vnto thee euen with a minde to spend my daies according to my small talent, for thy benefite. God keepe thy Soule and bodie for ever.

A Collection of English Medicines, &c.

Bfinthium, Wormwood the infusion decoction, or iuce thereof, being taken the wood.
quantitie of three cyaths or draughts eue-draughts. Frie day, cureth the Iaundise: Diescorides, it thrusteth out the cholericke humors of the bellie, and auoideth them by vrine; wherby it cureth the Jaundise: Galen, Paulus Aegyneta. The creame of

wormwood given by it selfe, is profitable to them that have the Iaundisc. Anton, Donatus ab also mari, Wormwood given in meat and drinke is profitable, to them that have the laundise. Adam, Lonicersu. Wormwood boiled with Smallage or mayden haire, is with great profit given against the laundise. Ant. Mizaldus. If hee that hath the laundife, doedrink two ounces of the juice of wormwood, for the space of ten daies togither with fugar, hee shall bee cured of the Iaundise. Gualtherus Riffius. Wormwood boyled in wine and drunke, cureth the Iaundise: Nicholas Spindlerus. The seed of wormewood if it be boyled with the roote of the Flowerdeluce and drunke, doth verie much availe against the laundise:

Anton.

Anton, Mizaldus.

Aporionagainft the Laundise

I have given (faith the Author) that potion of wormwood which Iohn Wierus hath prescribed for the Scuruic, & have very happily cured many of the Laundise, and this is the forme of the potion. Take and Scuruy Comstrum of wormwood, our drie common wormwood, luniper berries bruled; goats milke, or for want thereof cowes milke or whey of milke, the quantitie of foure pyntes, boil it to the confumption of the third part, and let it be strained with expreffion, then mixe therewith a drachm of faffron in pouder, then againe let it boile another walme and straine it, this decoction must be given somewhat warme, thrice a day, viz, in the morning fafing, and at three of clocke in the afternoone, and at entrance into bed : by our owne experience wee knowe that wormwood wine doth eurethe laundife. Actuarius faith that the firup of wormwood doth cure the laundile, as witnesseth Vitalis de furno, and Adolphus Occo. Abrotanum, Sothernwood: the wine of Sothernwood being drunke, is verie good for the laundise, Dioscorid. Acanthum or Bearefoot: the rootes whereof which the Romans doe call tricardumean three or foure rootes greene or drie boyled inwater to the consumption of the one half, and expressed, and strained from the roots; give thereof to drinke against the Laundise : Galenus.

Sothernmorad. Bearefoot.

Sorrel.

Acetofa : exten byit felfe and the decoction of the root boyled to the thirds, doth suddenly helpe those that have the laundile : Actius. It is approoued in the laundile to give the rootes of Sprel : Auicenna, Mesue, Valescus. The roots of Sorrel drunke with wine helpeth those that hauethe Laundise: Antonius

Mizaldus

into

tais

for

Mizaldus. A certaine man that had the Iaundise, vied to eate the condite of Sorel, which he did eate in the morning fasting, and dranke thereupon a little endiue water, and so became hole as witnesseth Amatus Lustanus. Acetum, Vinegar: If he that hath the Vinegar. Laundise, and sitteth in the sunne, and doth draw vp into his nostrels most sharpe venegar, and do containe the same a little while, pressing his nostrels; it doth carry away the reliques of the laundise, which doe remaine about the eyes and the face. Actius. Paulus Fuchsius and many others. For theyellownesse of the eyes it is good to smell to vinegar actually hot, because those subtile parts do ascend vp to the head, afterwards by reuerberation they do descend to the eyes, and there they ratifie the pores of the eyes, and after they exhale. Marcus Catinarius faith, it is our experiment.

Acorus, or Galengal: the decoction thereof and Galengal. redde Cicers giuen to drinke, is a present remedie for the laundile, Petrus Hispanus, Leonellus Fauentinus. Make a bath of the water of the decoction of Acorus, and it doth the same. A draught of the decoction of Acorus in water, cureth the laundise

Quintus Appollinarius.

Adiantum, Mayden or Venus haire: euery kinde of them, is profitable for the ouerflowing of the

gall. Dioscorides.

na,

Mayden haire boyled in wine or aqua mulfa, and drunke for some fewe daies together helpeth the obstructions of the liver, and therefore consequenly is good against the Iaundise: so sayth Adamus Lonicerus. And, generallie, Omne adiantum, quia lecoris obstructiones aperit, Ictericis confert. Eucry

Euery mayden haire because it doth open the obstructions of the liver, is verie good against the Iaudise: Fernelius

Agaricke.

Agaricus: agaricke, is given the quantitie of two drachms, to those that have the landise: to those that seele a sever, it must begiven with aqua mulfa, but otherwise in vino mulfo. Dioscorides. Agarike hath a digestive facultie, and doth cut and incide grosse humors, and doth purgestrom the tournings of the bowels, and therefore it doth cure those that are troubled with the yellow landise, through the obstruction of the liver. Galen. Agarike doth mightily open obstructions in the laundise. Nicholas Piso. Agaricke with rheubarb is an excellent medicine in the landise. Gualtherus Bruel; the often vie therof is good against the laundise, whether it be in potions, or in pils.

Agrimoni.

Agrimonia (called commonly Eupatorium) the decoction of common Eupatorium or the inice is with greate profit given to them that have the Iandile. Mathiol. The diffilled water dranke, cureth the Iaundile. Adam. Lonicerus.

Camapit.

Ainga: (or Chamepitios) the scaues beeing drunke for scauen daies together in wine, cureth the Iaundise. Dioscor. Chamepitios is a good remedie for them that be troubled with the Iaundise. Galen. The decoction thereof cureth the Iaundise. Mesur. Fernelius affirmeth that it is a good remedie for the Iaundise; and Petrus Bayras saith that it cureth the Iaundise: Being given to drinke with melicrato it cureth those that have the Iaundise. Iacobus Sylvin.

allekengi

Alcechengi: the berries thereof being drunk with fome conuenient liquor, doth purge the Innedile by

rin

isy

int

vrin : Anthon, Fumanellus.

Allium or garlicke : Pranagoras doth mixe gar- Garlick lick with wine and Coriander against the laundise.

F .

th

. Aloes being given the weight of a drachme to Aloes drinke, doth purge the yellow I aundise, Dioscorides. Adam Lonicerus, if the cause of the landise doe proceede from obstruction of phlegme or groffe choler, as for the most part it doth, take one drachme of Aloes in the forme of pils, an houre before supper and it is an effectuall remedy if it be continued cuery other day: & if it be too weak to purge let it be strengthned with three or fower graines of Diagridium: Io. Arculanus, Aloes taken with goats milke cureth the laundise : Quin. Apollinares. To cuacuate choler in the I aundise, Aloes in the forme of pils is verie much commended. Leonellus Fagentinus.

Ambubeia, Common succorie: The whole plant Common boyled and drunke, helpeth those that are troubled Sucherie.

with the yellow laundile. Mathiolus. see Intybus.

Ammoniacum : gum Ammoniack being given to the quantitie of two scruples with mulfo & the roots of Cappars or with Aromaticall wine, it is good against the Iandise, and helpeth them that bee falling into the Dropfy, auoiding wonderfully by the belly, die the obstructions of the bowels: 1 acob. Hollerius. Ammoniacum is commended against the Iaundise, for it is verie forcible to deliuer from obstruction, for it cureth the Iaundise, and those that are readie to fall into the droply through the lame. Nich. Pife.

Amygdale, Almonds: the kernells of wilde Al- Almonds. monds bruled with vineger, and strained, and the liquor expressed, and given in the morning to the

ficke patient, vpon a fasting stomach, or in the euening at the entrance into bed, is good against the laundife. Hieronimus Bru (wicenfis.

Anagalles, pimpernel: some vse the inice therof to Pimpernel. purge the head by the nostrils, if any of the laundise doc rest about the face & eyes: Aetius, Fuchfius, Anton, Donatus.

Bugloffe.

Anchusa, red buglosse, (so called in shops) the first decoction thereof is given to them that have the laundise: and if there bee withall a feuer, it is giuen with aqua mulfa. Dioscorides: Adamus Lonice-

Onaclea.

Anchusa called Onoclea, hath the propertie to clense and purge bilous, and cholericke humors, wherfore it is given to them that have the Iaundise: Galenus.

Two spoonefuls of the drie roots, taken in three draughts of water to drink, is good for the same purpose: idem Galenus. The root of red buglosse boyled in water to the thirds, is drunke for the Iaundise: or contunde and bruse one drachme in odoriferous wine and drunke, is good for the lame. Actius. A full spoonefull of Anchusa brused and given with mulfa for the landile. Nich. Myrepfus.

Anchusa, called by Dioscorides, Onoclea, & by some is the root of red bugloffe: let it be boyled with mulfaif there be a feuer, or in water or thinne wine, adding thereto sugar or honey, and give the decoction thereof to them that have the Iaundise, or two drachms thereof reduced into pouder, and give it in foure ounces of mulfa, or thinne white wine : Iaco-

bus Hollerius.

Goole dung

Anseris stercus Goose doung: It is a countrie medicine to cure the laundise, given the weight of

atrie

two drachms in wine for for daies; this is prooued. I fayth the Author am wont to cure with this following medicine the Iaundise (which medicine is vsed in Frisa by the common people in the Scurule) but especially if it be the black I aundise: I take goose dung, and oxe dung, fuch as have fed onely vpon graffe, of either a like quantitie, that is to fay the quantitie of three acorns, or two chesnuts, and I macerate them for a fewe houres in foure pintes of Rhenish wine for the richer sort, and in stale beere for the poorer, afterwards I straine it through a linnen cloth gently and so let it settle; then I take two ounces of Radish roots sliced and brused, then infuse it in some fit liquor, wine or 1168, beere, and let it macerate for a night, then in the morning straine it, and mix it with the first liquor of the goole and oxe dung, and so being mixt together vie them : and that it may be the better for the tafte, bruse lightly nutmeg & cloues and let it hang therin tyed in a peece of linnen : of this liquor as often as the ficke will, let him drinke thereof, so that in the whole time of his cure, let him drinke no other drinke: This medicine although it bee somewhat rustical and common, yet is of great vse in this businesse, as we finde by experience, so that nevertheleffe those things aperitive bee not neglected, which by the art of Phylicke ought to be given. And if we consider the ingredients of this medicine, it expelleth the laundise by vrin, for this potion doth consist of diureticks and of subtill parts : for we see how much the Radish availeth, that being taken by any manner of meanes cureth the Jaundise. The goofe dung is of that hot faculty that it burneth the 76

graffe where it lyeth: heerehence wee may gather how, and of of what subtile and thin parts is is, and how mightily it moueth vrin, being transsussed, with some convenient liquor. The dung of a bull hath also the same vertue, cheefely if it bee gathered in the sields. Some that are superstitious will have that dung gathered that hath redde haires; but that is not needefull, so that it be gathered in the field where they seede on graffe: Some gather it in the winter whiles they feede on hay, but every man may doe as they please: And this satth the Author is my experiment.

Goose grass

Aparine: goose grasse the distilled water thereof, taken twice or thrice a day, the quantity of three spoonefulls, is an excellent remedy against the Iaundise. Adam. Lonicerus: Nich. Spindlerus.

Smallaga.

Apium: Smallage. The roots of Smallage boyled in some Apozem, and being strained and drunk, helpeth the Iaundise: Fernelius.

Garden Smallage, or the feed of common parfly, is given in white wine for the Jaundife: Anton. Mi-

Zaldus.

Saltwater.

Aqua salsa, salt water: Asclepiades ministred saltwater for two daies together against the Iaundise: Celsus.

Aquilegis: Columbine: the roots thereof given being bruled, the weight of a drachme, with Saffron the weight of halfe a drachme, drunke in wine, & the body coursed forthwith and caused to sweat, it doth very much avail against the landise: Adam Lonicerus.

The feeds of Columbine, as those that doe write of the vertue of herbs, given in the wine of Candy the quantitie of 2. drachmes adding thereto a little

faffron.

Arthemisia, Motherwort: some give the distilled Motherwater to drinke, against the laundise: Gualtherns worte. Ruff. Artemesia with the leaves of harts tonge and a little wormewood boyled in wine and drunke, is

good against the Iaundise : Quint. Apollin.

Asarum Asarabacca: cureth the saundise by o-Asarabacpening the obstruction of the liver and splene: Ferca.
melius. Asarabacca put in sirup, cureth the saundise
through oppilation, and properly the infusion therof, Pet. Bayrus, put into must or newe wine so that
it may boile therewith, cureth the saundise: others
put Asarabacca in Must for three months, then they
straine it, and give the same wine, and it is wonderfull against the saundise, Idem. Wine of Asarabacca
is exceeding good for the overslowing of the gall:
loan. Placotamus.

Asparages: Sperage the root therof boyled with Sperage figs or Cifers and so taken doth cure the laundise: Diescorides. The wilderoot thereof is good against the laundise, the seede thereof also given in drinke is good for the same : Carolus Clusses: the roote of Asparagus boyled in wine by opening the obstructions

obstructions of the liver, cureth the laundise. A-dam. Lonicerus. As well the root as the seed hel-

peth the laundise. Fernelius.

The rootes of Afparagus boyled with thinne white wine, is given the quantitie of foure ounces for a time, against the I aundise. Marcus Gatinaria.

Daffodil. Coporas. Asphodelus, Daffodil, the roote drunke with wine helpeth the laundise. Mathiolus.

Atramentum sutorium, or Calcanthum called in shops Vitriol, I finde very effectuall to purgethe head in the Iaundise. Vitriol also dissoluted in womans milke. Actius.

Orach.

Atriples, Orache, or Orage, the seede drunke with aqua mulfa, cureth the laundisc. Dioscoride.

The seede of Orache, helpeth the Iaundise, that commeth by obstruction of the liver. Galen.

When there is a feuer with the I aundise, Atriplex is verie good, because it openeth: Mesue.

The leede of Orache given the weight of a drachme with fero lastis, is also good. Nonus.

Mouseeare

Auricula muris, mouse eare: the kindes of these are pilosella maior, and minor: every kinde of them taken morning and evening sasting boyled in wine, helpeth those that are troubled with the Iaundise. Adam. Lonicerus.

The decoction of Pilocella cureth the Jaundise.

Nich. Pifo.

The water of the decoction of Pilofella being drunke, or the wine thereof doth presently helpe them which have the laundise. Petrus His-

P

Opening of the belly.

Paracentesis: is the last remedie in the dropsie, and is not to be vsed without vrgent necessitie; but the belly being once well, and orderly opened, it worketh great effect, for the water is thereby enacuated, which cannot otherwise bee carried from that region, neither is that Apertion lo daungerous, if it bee rightly done. For we often fee, some that are wounded in the belly to recouer, so that the small guttes be not wounded; besides, it is profitable to them to whom an eruption hapneth by chance through the nauell, for thereby the water is auoided, and they are cured. But nevertheleffe, this kinde of cure is not to bee affaied in those whose facultie of the liver is dead, and that cannot ingender good blood: or in those that have a Schirrhus of the liver or splene confirmed, or in those that have this disease bred from an vicer of the lungs: for experience doth teach vs, that all those doe die with this remedie, neither must this remedie be tried, in verie olde or weakemen. But indeede all the time of the cure! we must fludie to strengthen the liver and bowels, as much as may bee. Ioh. Wierus.

This cure which we call paracentesis, is not fit for any kindes of the dropsies, but that which wee call Ascites. Paulus. Hippocrates doth commend paracen-

tefis in the dropfie. Galenus.

Benedict, telleth that hee hath proued by his owne experience, that if from the beginning of a pestilent sever, the patient drinke two ounces of the juice or three at the most, and then afterwards be wellcouered with clothesto (weat, be shall be delivered from the same, Symphor. Campegiws. The distilled water of Marigolds, doth retist thepestilence, and venome: Iodochus Harchius.

Cardnus benedictus, the bleffed Thiftle: the pouder of the leaves ministred the quantitie of halfe a drachme, is verie good against the pestilence, especially if it be received within twentie foure houres after the sickenesse is taken, so that the patient sweat vpon the lame: the like vertue hath the wine wherin the herbe hath beene sodden. The Italians make great account of this herbe, especially against the pestilence. Mathiolus. The pouder of the leaues as much as will goe into a walnut thell, being drunke with wine, is a great preservative against the pestilence. The same vertue hath the leaves boyled in wine and drunke. Tragus lib. 2. Hiftor. Plant, et Adam. Lonicerus:

The bleffed

Onion.

Cepa, the Onion: some give the ivice of white Onions with vinegar. Marfel. inepid. Cap. 9. an onion with milk or butter being eaten, is verie good in this disease of thepestilence. Ant. Guainer. de peste diff. 2. Cap. 3. There are some labouring men that before they goe forthin the morning, are vied to eate a rawe onion with falte & breade insteed of Triacle. against the infectious aire, perswading themselves that then they were fafe for that day, that vied this remedie: neither did their hope faile them, for it appeared by experience, that as there was nothing more common, so there was nothing more effectuall against the distemperature of the aire, for this is as good as a Triacle. Trag. lib. 2. Histo. plantarum. Auicen sheweth that he which eateth a rawe onion betimes in the morning fasting with milke, shall be allthat day preferred from Epidemial diseases.

Celendine.

Celidonium, Celendine: the water of the greater Celendine, drineth away venome from the heart by sweate, therfore it is good in the pestilence. Ant.

Cicoree.

Cichoria, Cichorie, Mars. Fic. in epid. Cap. 6. the waof Cichorie is drunke against the pestilence. F. Lym. in historia aquarum. I he weight of an ounce, or halfe an ounce at a time. Brunswe.

Dones dung

Columbarum stercus, Doues dung: it is holden that a fume made therof is good to deliuer him that is infected, & to prouoke vomit, Ant. Sneibergerus.

Comfry.

Consolida maior, the greater Comfry they fay there are fine herbs, very conneniet in this case to be vsed both inwards & outwards, which doe resiste venom, and are as it were temperate, that is to say, Consolida maior, Scabiosa, Agrimonia, Britanica. Aristolochia,

Mars.

Ioan, Crato.

Marf. Ficinus in epidem. cap. 15. vseth these words, Somesay that Consolida being brused between two stones, cureth the Anthrax and Carbunele by dinine miracle. Ioan. de Vigo. These three plants are commended by all learned Physitians, to bee applied vpon the Anthrax or Carbunele, Morsus Diaboli, Scabiosa, and Consolida maier, if they may bee had fresh: bruse the Scabiosa and Consolida with alittle salt, and fresh pork-larde, and let it be applyed hot, and remaine for a day naturall; in the forme of an Emplaster. Learned Chirurgians doe teach, that these plants do maruelously resist the Carbunele, also if Comfry brused betweene two stones be applied. Ioan. Crato.

Cornu cerwinum, Harts borne: Some vie the sha-Harts born. uings of Harts borne, or the bone found in the heart of the Hart, for they hold opinion, that it strengthneth the heart and preserves from poyson. Anton, Funanellus. That same bone founde in the heart is exceeding pretious against everievenome, & is mix. ed with everie Antidote that is prepared against venome. Mathiolus. The first head or horne of the Hart, is thought marvelously to resist venome, no lesse then doth the Vincornes borne: the bone of of the heart is verie available against venome and the pessilence, for so witnesset Andernacus.

The pouder of the Flarts horne being often taken, doth preferue from the pessilence; the often drinking in a cup wherein is beauts horne, is a greater helpe in the pessilence then any other medicin.
